Weapons, Warriors & Battles of Ancient Iberia Fernando Quesada-Sanz, 2023-12-30 Winner of Hislibris Award for the Best Historical Book faithfully translated into English for the first time this book details the equipment weapons armor horse tack fortifications tactics and cultures of the units that served as the backbone of the Carthaginian army In ancient times the Iberian Peninsula Spain and Portugal was home to warriors of great renown Iberian and Celtiberian warriors both infantry and cavalry served as the backbone of the Carthaginian armies that terrorized Italy under Hannibal and proved even more fierce when defending their homeland against later Roman occupation The Lusitanian resistance under Viriathus was among the toughest the Romans encountered anywhere Professor Quesada Sanz details the arms armour and equipment of the various warriors of the region in fantastic detail drawing on his intimate knowledge of the latest archaeological and historical research His clear and informative text is

supported throughout by a wealth of photographs diagrams and exquisite colour artwork by Carlos Fernandez del Castillo This beautiful book is a rare combination of detailed comprehensive information and sumptuous visual appeal that will be cherished by anyone with an interest in the warriors and weapons of the ancient world The Spanish edition won the Hislibris Award for the Best Historical Book for 2010 and is here faithfully translated into English Non-covalent Interactions in the Synthesis and Design of New Compounds Abel M. Maharramov, Kamran T. Mahmudov, Maximilian N. Kopylovich, Armando J. L. Pombeiro, 2016-04-18 This book aims to overview the role of non covalent interactions such as hydrogen and halogen bonding anion and electrostatic interactions hydrophobic effects and van der Waals forces in the synthesis of organic and inorganic compounds as well as in design of new crystals and function materials The proposed book should allow to combine in a systematic way recent advances on the application of non covalent interactions in synthesis and design of new compounds and functional materials with significance in Inorganic Organic Coordination Organometallic Pharmaceutical Biological and Material Chemistries Therefore it should present a multi and interdisciplinary character assuring a rather broad scope We believe it will be of interest to a wide range of academic and research staff concerning the synthesis of new compounds catalysis and materials Each chapter will be written by authors who are well known experts in their respective fields *The Chicago Daily News Almanac and Year Book for ...* George Edward Plumbe, James Langland, Claude Othello Pike, 1913 **Modularity in Motor Control: From Muscle Synergies to Cognitive Action Representation** Andrea d'Avella, Martin Giese, Yuri P Ivanenko, Thomas Schack, Tamar Flash, 2016-04-21 Mastering a rich repertoire of motor behaviors as humans and other animals do is a surprising and still poorly understood outcome of evolution development and learning Many degrees of freedom non linear dynamics and sensory delays provide formidable challenges for controlling even simple actions Modularity as a functional element both structural and computational of a control architecture might be the key organizational principle that the central nervous system employs for achieving versatility and adaptability in motor control Recent investigations of muscle synergies motor primitives compositionality basic action concepts and related work in machine learning have contributed to advance at different levels our understanding of the modular architecture underlying rich motor behaviors However the existence and nature of the modules in the control architecture is far from settled For instance regularity and low dimensionality in the motor output are often taken as an indication of modularity but could they simply be a byproduct of optimization and task constraints Moreover what are the relationships between modules at different levels such as muscle synergies kinematic invariants and basic action concepts One important reason for the new interest in understanding modularity in motor control from different viewpoints is the impressive development in cognitive robotics In comparison to animals and humans the motor skills of today's best robots are limited and inflexible However robot technology is maturing to the point at which it can start approximating a reasonable spectrum of isolated perceptual cognitive and motor capabilities These advances allow researchers to explore how these motor sensory and cognitive

functions might be integrated into meaningful architectures and to test their functional limits Such systems provide a new test bed to explore different concepts of modularity and to address the interaction between motor and cognitive processes experimentally Thus the goal of this Research Topic is to review compare and debate theoretical and experimental investigations of the modular organization of the motor control system at different levels By bringing together researchers seeking to understand the building blocks for coordinating many muscles for planning endpoint and joint trajectories and for representing motor and behavioral actions in memory we aim at promoting new interactions between often disconnected research areas and approaches and at providing a broad perspective on the idea of modularity in motor control We welcome original research methodological theoretical review and perspective contributions from behavioral system and computational motor neuroscience research cognitive psychology and cognitive robotics

Identity and Migration in Europe:

Multidisciplinary Perspectives MariaCaterina La Barbera,2014-11-24 This book addresses the impact of migration on the formation and transformation of identity and its continuous negotiations Its ground is the understanding of identity as a

complex social phenomenon resulting from constant negotiations between personal conditions social relationships and institutional frameworks Migrations understood as dynamic processes that do not end when landing in the host country offer the best conditions to analyze the construction and transformation of social identities in the postcolonial and globalized societies Searching for novel epistemologies and methodologies the research questions here addressed are how identity is negotiated in migration processes and how these negotiations work in contemporary multiethnic Europe This edited volume brings to the field a novel convergence of theoretical and empirical approaches by gathering together scholars from different countries of Europe and the Mediterranean area from different disciplines and backgrounds challenging the traditional discipline division
