Tindale, 2020-12-30 This innovative text reinvigorates argumentation studies by exploring the experience of argument across cultures introducing an anthropological perspective into the domains of rhetoric communication and philosophy The Anthropology of Argument fills an important gap in contemporary argumentation theory by shifting the focus away from the purely propositional element of arguments and onto how they emerge from the experiences of peoples with diverse backgrounds demonstrating how argumentation can be understood as a means of expression and a gathering place of ideas and styles Confronting the limitations of the Western tradition of logic and searching out the argumentative roles of place orality myth narrative and audience it examines the nature of multi modal argumentation Tindale analyzes the impacts of colonialism on the field and addresses both optimistic and cynical assessments of contextual differences The results have implications for our understanding of contemporary argumentative discourse in areas marked by deep disagreement like politics law and social policy The book will interest scholars and upper level students in communication philosophy argumentation theory anthropology rhetoric linguistics and cultural studies

The Philosophy of Argument and Audience Reception Christopher W. Tindale, 2015-04-30 This book approaches the topic of argumentation from the perspective of audiences rather than the perspective of arguers or arguments

The Pragmatics of Cogent Argumentation in British and American Political Debates Waleed Ridha Hammoodi Al-Juwaid, 2019-03-05 Since the time of Aristotle various approaches have been offered to tackle what makes language stronger Some approaches have focused on rhetoric while others have

given attention to logic Still others have concentrated on dialectics This book takes into account a full fledged comprehensive model of analysis that brings these three perspectives together Throughout it investigates the presence of pragmatic criteria and the utilization of pragmatic strategies that make language stronger in the context of argumentation Cogent argumentation is a pragmatic communicative interactional process that goes through stages and is regarded as a communicative exchange of arguments The cogency of these arguments is attained according to the availability of pragmatic criteria and the utilization of pragmatic strategies and determined throughout the whole process of argumentation The book will be of interest to anyone interested in the fields of pragmatics communication and politics and will widen their understanding of the pragmatic structure and criteria which constitute cogent argumentation **Integrating the Human**

Sciences Rick Szostak,2022-11-15 What if we recognized that the human sciences collectively investigate a few dozen key phenomena that interact with each other Can we imagine a human science that would seek to stitch its understandings of this system of phenomena into a coherent whole If so what would that look like This book argues that we are unlikely to develop one unified theory of everything Our collective understanding must then be a map of the myriad relationships within this large but finite and manageable system coupled with detailed understandings of each causal link and of important subsystems The book outlines such a map and shows that the pursuit of coherence and a more successful human science enterprise requires integration recognizing the strengths and weaknesses of different methods and theory types and the pursuit of terminological and presentational clarity It explores how these inter connected goals can be achieved in research teaching library classification public policy and university administration These suggestions are congruent with and yet enhance other projects for reform of the human sciences This volume is aimed at any scholar or student who seeks to comprehend how what they study fits within a broader understanding A Rhetoric of Meanings Gergana

Apostolova,2015-09-04 This book presents an in depth analysis of language s role as the tool and environment for human survival on Earth examining its ability to provide an unlimited space for telling individual stories that bear the knowledge of mankind s self significance The book is the result of a 20 year long composite study of language phenomenology grounded in the interactions of Bulgarian and English approached in a game like fashion where the play with language units transcends levels of meanings based on significances and explored through the four basic avatars of activated language the learner the teacher the translator and the creator of texts The book is divided into three sections the first details the motivation for this study and the design of the method of exploration This is followed by an application of this method to the talkative web in order to find ways of meeting the enormous demand for human content The final section brings together the colourful practices of activated language movement This book is not about the philosophy of language per se It is concerned with the practical field beyond the philosophy of language where the self identification of the Subject is brought to a higher stage of communicative creativity The rhetoric theory of argumentation is argued throughout the book to be the relevant ground for

building a holistic tool of language learning where language acquisition is seen as the capability of the subject to construct worlds in a universe whose leading structure involves the rhetoric criteria of ethos pathos and logos on the one hand and the self identifying choice of meanings to situations of complex nature on the other As such the book is primarily concerned with linguistics rhetoric semiotics of culture ethics and language learning viewed through a philosophical preoccupation with humanity

Argumentation Machines C. Reed, T.J. Norman, 2013-03-09 In the late 1990s AI witnessed an increasing use of the term argumentation within its bounds in natural language processing in user interface design in logic programming and nonmonotonic reasoning in AI's interface with the legal community and in the newly emerging field of multi agent systems It seemed to me that many of these uses of argumentation were inspired by of ten inspired guesswork and that a great majority of the AI community were unaware that there was a maturing rich field of research in Argumentation Theory and Critical Thinking and Informal Logic that had been steadily re building a scholarly approach to the area over the previous twenty years or so Argumentation Theory on its side was developing theories and approaches that many in the field felt could have a role more widely in research and society but were for the most part unaware that AI was one of the best candidates for such application
