S. Schweber, 2013-10-31 How two charismatic exceptionally talented physicists came to terms with the nuclear weapons they

helped to create In 1945 the United States dropped the bomb and physicists were forced to contemplate disquieting questions about their roles and responsibilities When the Cold War followed they were confronted with political demands for their loyalty and McCarthyism's threats to academic freedom By examining how J Robert Oppenheimer and Hans A Bethe two men with similar backgrounds but divergent aspirations and characters struggled with these moral dilemmas one of our foremost historians of physics tells the story of modern physics the development of atomic weapons and the Cold War Oppenheimer and Bethe led parallel lives Both received liberal educations that emphasized moral as well as intellectual growth Both were outstanding theoreticians who worked on the atom bomb at Los Alamos Both advised the government on nuclear issues and both resisted the development of the hydrogen bomb Both were in their youth sympathetic to liberal causes and both were later called to defend the United States against Soviet communism and colleagues against anti Communist crusaders Finally both prized scientific community as a salve to the apparent failure of Enlightenment values Yet their responses to the use of the atom bomb the testing of the hydrogen bomb and the treachery of domestic politics differed markedly Bethe who drew confidence from scientific achievement and integration into the physics community preserved a deep integrity By accepting a modest role he continued to influence policy and contributed to the nuclear test ban treaty of 1963 In contrast Oppenheimer first embodied a new scientific persona the scientist who creates knowledge and technology affecting all humanity and boldly addresses their impact and then could not carry its burden His desire to retain insider status combined with his isolation from creative work and collegial scientific community led him to compromise principles and ironically to lose prestige and fall victim to other insiders S S Schweber draws on his vast knowledge of science and its history in addition to his unique access to the personalities involved to tell a tale of two men that will enthrall readers interested in science history and the lives and minds of great thinkers **Questions and Answers about Islam Vol 1**

Sager, 2003 A Guided Science Jaan Valsiner, 2017-07-05 That sciences are guided by explicit and implicit ties to their surrounding social world is not new Jaan Valsiner fills in the wide background of scholarship on the history of science the recent focus on social studies of sciences and the cultural and cognitive analyses of knowledge making The theoretical scheme that he uses to explain the phenomena of social guidance of science comes from his thinking about processes of development in general his theory of

bounded indeterminacy and on the relations of human beings with their culturally organized environments Valsiner examines reasons for the slow and nonlinear progress of ideas in psychology as a science at the border of natural and social sciences Why is that intellectual progress occurs in different countries at different times Most responses are self serving blinders for presenting science as a given rather than understanding it as a deeply human experience For Valsiner scientific knowledge is cultural at its core Major changes have occurred in contemporary sciences collective authorship fragmentation of knowledge into small quickly published and equally quickly retractable journal articles and the counting of numbers of such articles by institutions as if that is a measure of scientific productivity Scientists are inherently ambivalent about the benefit of these changes for the actual development of knowledge There is a gradual takeover of the domain of scientific knowledge creation by other social institutions with vested interests in defending and promoting knowledge that serves their social interests Sciences are entering into a new form of social servitude
