Walking through the Script

Examining the script presented above, here is a step-by-step analysis of what the script does (in each scripting language):

1. Establish communication with the InDesign application object:

   AppleScript: `tell application "Adobe InDesign CS3"`

   JavaScript: Refer to the application as `app`.

   VBScript: `Set myInDesign = CreateObject("InDesign.Application.CS3")`

2. Create a new document and a reference to the document:

   AppleScript: `set myDocument to make document`

   JavaScript: `var myDocument = app.documents.add();`

   VBScript: `Set myDocument = myInDesign.Documents.Add`

3. Create a new text frame on the first page and a create a reference to the text frame:

   AppleScript:
   ```
   tell page 1 of myDocument
   set myTextFrame to make text frame
   ```

   JavaScript: `var myTextFrame = myDocument.pages.item(0).textFrames.add();`

   VBScript: `Set myTextFrame = myDocument.Pages.Item(1).TextFrames.Add`

4. Set the geometric bounds (the location of the top, left, bottom, and right edges) of the text frame. In this step, the script uses measurement overrides ("p" for picas) to ensure the text frame is the correct size, regardless of your default measurement units. The locations are provided as a list, or array, of values; each scripting language has a slightly different way of creating an array. For more on array variables, see "Array Variables" on page 11.

   AppleScript: `set geometric bounds of myTextFrame to {"6p", "6p", "24p", "24p"}`

   JavaScript: `myTextFrame.geometricBounds = ["6p", "6p", "24p", "24p"];`

   VBScript: `myTextFrame.GeometricBounds = Array("6p", "6p", "24p", "24p")`

5. Add text to the text frame by setting the contents property to a string:

   AppleScript: `set contents of myTextFrame to "Hello World!"`

   JavaScript: `myTextFrame.contents = "Hello World!";`

   VBScript: `myTextFrame.Contents = "Hello World!"`
