Industrial Electronics and Telecommunications includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Industrial Electronics Technology not only the reviewing submissions and registration processes but also the actual conference. Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference. The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference. The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java. In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session.

Cockrell, 1958 Industrial Applications of Power Electronics Eduardo M. G. Rodrigues, Edris Pouresmaeil, Radu Godina, 2020-12-01

In recent years power electronics have been intensely contributing to the development and evolution of new structures for the processing of energy. They can be used in a wide range of applications ranging from power systems and electrical machines to electric vehicles and robot arm drives. In conjunction with the evolution of microprocessors and advanced control theories power electronics are playing an increasingly essential role in our society. Thus in order to cope with the obstacles lying ahead this book presents a collection of original studies and modeling methods which were developed and published in the field of electrical energy conditioning and control by using circuits and electronic devices with an emphasis on power applications and industrial control. Researchers have contributed 19 selected and peer reviewed papers covering a wide range of topics by addressing a wide variety of themes such as motor drives AC DC and DC DC converters multilevel converters varistors and electromagnetic compatibility among others. The overall result is a book that represents a cohesive collection of inter multidisciplinary works regarding the industrial applications of power electronics.
