

## Controlling Blood Glucose Concentration

When blood glucose is too high:

Change is detected by  $\beta$  cells as glucose moves into them by facilitated diffusion.

# Controlling

(The liver also starts converting glucose  $\rightarrow$  glycogen. This reduces the amount of glucose in the blood)

Insulin is released from the  $\beta$  cells into the capillaries. The capillaries carrying insulin move towards the cell membranes and it is released into the capillaries.

Insulin binds to target cells and binds to receptors on the cell membranes. Stimulates cells to increase the number of glucose transporter proteins in membranes. Glucose uptake is increased.

# Blood

When blood glucose is too low:

Change is detected by  $\alpha$  cells and  $\beta$  cells.

# Glucose

Glucose is taken up by the cell receptors and stored as glycogen for use later.

2. Glucagon (working opposite to insulin)

Insulin promotes

Glucose is released into the blood.

**Index Medicus** ,2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Experimental Evolution and the Nature of Biodiversity** Rees Kassen,2024-05-16 Uncovering the principles governing the origin and fate of biodiversity is the central goal of modern biology The first edition 2014 of this novel textbook drew on more than two decades of research in microbial experimental evolution to provide a sketch of a general empirically grounded theory of biodiversity and the first synthetic treatment of experimental evolution It has since become an indispensable resource to research laboratories around the world as an essential introduction to the field However the science has moved on considerably over the last decade and an updated and expanded treatment of the subject is now timely Three developments bearing directly on the issue of the nature of biodiversity now deserve particular attention and inclusion 1 The introduction of high throughput tools to capture the detailed dynamics of genetic variation are revealing that adaptation is a far more complex process than previously anticipated 2 A rapidly expanding literature on adaptation and diversification in the kinds of physically complex multispecies assemblages thought to characterize natural communities and 3 A growing literature on the evolution of novelty and innovation that takes advantage of the unique features of microbial evolution experiments to study both the ecology and genetics of this process In this second edition the author updates existing analyses with more recent work expands on existing chapters to include the most important new ideas and incorporates three new chapters parallel and convergent evolution the evolution of novelty and innovation coevolution detailing their respective contributions to our improved understanding of adaptation and diversification **Experimental Evolution and the Nature of Biodiversity** is an accessible upper level textbook aimed principally at graduate students and practising researchers interested in the evolution of biodiversity particularly through the lens of experimental evolution **Diabetic Medicine** ,1990 The Optical Clearing Method Luís Manuel Couto Oliveira,Valery Victorovich Tuchin,2019-11-27 This book describes the Optical Immersion Clearing method and its application to acquire information with importance for clinical practice and various fields of biomedical engineering The method has proved to be a reliable means of increasing tissue transparency allowing the

investigator or surgeon to reach deeper tissue layers for improved imaging and laser surgery This result is obtained by partial replacement of tissue water with an active optical clearing agent OCA that has a higher refractive index and is a better match for the refractive index of other tissue components Natural tissue scattering is thereby reduced An exponential increase in research using this method has occurred in recent years and new applications have emerged both in clinical practice and in some areas of biomedical engineering Recent research has revealed that treating ex vivo tissues with solutions containing active OCAs in different concentrations produces experimental data to characterize drug delivery or to discriminate between normal and pathological tissues The obtained drug diffusion properties are of interest for the pharmaceutical and organ preservation industry Similar data can be estimated with particular interest for food preservation The free water content evaluation is also of great interest since it facilitates the characterization of tissues to discriminate pathologies An interesting new application that is presented in the book regards the creation of two optical windows in the ultraviolet spectral range through the application of the immersion method These induced transparency windows open the possibility to diagnose and treat pathologies with ultraviolet light This book presents photographs from the tissues we have studied and figures that represent the experimental setups used Graphs and tables are also included to show the numerical results obtained in the sequential calculations performed

**Information and Communication Technologies for Agriculture—Theme II: Data** Dionysis D. Bochtis, Dimitrios E. Moshou, Giorgos Vasileiadis, Athanasios Balafoutis, Panos M. Pardalos, 2022-03-17 This volume is the second II of four under the main themes of Digitizing Agriculture and Information and Communication Technologies ICT The four volumes cover rapidly developing processes including Sensors I Data II Decision III and Actions IV Volumes are related to digital transformation within agricultural production and provision systems and in the context of Smart Farming Technology and Knowledge based Agriculture Content spans broadly from data mining and visualization to big data analytics and decision making alongside with the sustainability aspects stemming from the digital transformation of farming The four volumes comprise the outcome of the 12th EFITA Congress also incorporating chapters that originated from select presentations of the Congress The first part of this book II focuses on data technologies in relation to agriculture and presents three key points in data management namely data collection data fusion and their uses in machine learning and artificial intelligent technologies Part 2 is devoted to the integration of these technologies in agricultural production processes by presenting specific applications in the domain Part 3 examines the added value of data management within agricultural products value chain The book provides an exceptional reference for those researching and working in or adjacent to agricultural production including engineers in machine learning and AI operations management decision analysis information analysis to name just a few Specific advances

covered in the volume Big data management from heterogenous sources Data mining within large data sets Data fusion and visualization IoT based management systems Data Knowledge Management for converting data into valuable information Metadata and data standards for expanding knowledge through different data platforms AI based image processing for agricultural systems Data based agricultural business Machine learning application in agricultural products value chain

*Biological Monitoring in Water Pollution* John E. Cairns, 2017-05-03 Biological Monitoring in Water Pollution focuses on the processes methodologies and experiments involved in monitoring water pollution Divided into six parts the selection features the contributions of authors who have devoted time and energy in advancing biological monitoring to measure pollution in water The first part is a review paper that focuses on the strengths of biological monitoring relative to the detection of harmful conditions This part stresses that biological monitoring has received considerable attention The second part deals with review papers on biological monitoring The discussions focused on the identification of problem the review of functional methods community and ecosystem indices used in biomonitoring and structure and function relationships relative to ecosystem stress The third part covers the application of community structural analysis to biomonitoring programs This part puts emphasis on the need to develop methods to identify community structures relative to the conduct of ecological research Other parts of the selection are devoted to toxicity testing and discussions on the monitoring of waste discharges and introduction of chemicals to the environment Experiments and models are presented to support the claims of the authors The book can be a valuable source of information for those interested in the monitoring of water pollution

*Resistant Starch: Advances and Applications in Nutrition for Disease Prevention* Hongliang Zeng, Xianyang Bao, Hongmin Dong, 2025-08-11 Resistant starch RS is a type of dietary fiber that has garnered significant attention for its potential health benefits and applications in nutrition It resists digestion in the small intestine and reaches the large intestine where it undergoes fermentation by gut microbiota This process produces various beneficial byproducts such as short chain fatty acids SCFAs which have been linked to numerous health promoting effects The unique properties of resistant starch make it an intriguing field of research particularly regarding its potential role in disease prevention This special issue aims to explore the advances and applications of resistant starch in nutrition for disease prevention It seeks to gather the latest research on various aspects of resistant starch including its types and sources digestive fate and metabolic effects gut microbiota modulation and its potential role in preventing diseases such as obesity diabetes cardiovascular diseases and cancer Potential Topics of Interest including but not limited to 1 Types and Sources of Resistant Starch Classification and characterization of different types of RS Food sources rich in RS and their nutritional profiles Novel sources or innovative methods for increasing RS content in food products 2 Digestive Fate and Metabolic Effects of Resistant Starch Mechanisms of RS digestion and fermentation in the gastrointestinal tract Metabolic effects of RS on glycemic control lipid metabolism and energy balance Effects of RS on postprandial glucose and insulin responses 3 Gut Microbiota Modulation by Resistant

Starch Influence of RS on gut microbiota composition and diversity Production of short chain fatty acids SCFAs by gut microbiota from RS fermentation Interactions between RS gut microbiota and host health 4 Resistant Starch and Disease Prevention Epidemiological studies linking RS consumption to the prevention of obesity diabetes cardiovascular diseases and colorectal cancer Mechanisms underlying the protective effects of RS in disease prevention Clinical trials evaluating the efficacy of RS interventions in disease management and prevention

**Active and Healthy Aging and Quality of Life: Interventions and Outlook for the Future, volume II** Shekhar Chauhan, Petra Heidler, David Jean Simon, 2024-09-10 The continuous growth of older populations as a consequence of demographic changes is a huge global challenge The growing proportion of older adults not only burdens the healthcare system specifically in developing countries but also posits a challenge at the household level specifically in nuclear and one person households For societies as a whole to avoid costly and negative effects it is crucial to increase their knowledge of how to promote good health among older adults so that they can live longer and enjoy a better quality of life Active aging is the process of optimizing opportunities for health participation and security in order to enhance quality of life as people age An active and healthy life has remained one of the most important aspirations for all people both young and older adults alike This ambition has become a genuine possibility for many due to a rising life expectancy among people of diverse attributes across the world While celebrating longer life and more financial security in later life than ever before we need to challenge how these aspirations can be sustained through our own behavioral responses and through public policy institutional reforms and innovations The challenge is to identify recommend and promote strategies and interventions that stimulate and sustain the activity independence and health of people of all ages especially older adults and in the process promote the well being and quality of life of people and make public welfare systems more sustainable
