

Using the Z-Stuff DZ-1008A Relay with an insulated track section.

The DZ-1008A relay can be used to active many accessories that normally require an ITAD. This is of great advantage for layouts that are located in rooms with variable lights levels. Inferred devices tend to be sensitive to the changing levels of light from windows and over head lighting. A more reliable way to active trackside accessories is with an insulated track section. For accessories that are simply turned on and off, wiring through an insulated track section is easy. But many of today's modern accessories require the use of a relay to power part of an accessory when a train is present, but still maintain power to a different circuit when a train is not present. One example is the MTH #30-11036 track signal. The wire colors for this signal are used in the diagram below.
