Understanding Main Ideas

Study the diagram and then answer the following on a separate sheet of paper.

- When the wires are connected to the terminals of the battery, what causes electric current in the circuit? *Voltage - the difference in electrical potential energy*
- What is the voltage source and what is the conductor in this circuit? *Battery* *Wire*
- What are two ways you could alter the wire to increase the resistance in the electric circuit?
 - 1) conductor - use a poor conductor instead of wire*
 - 2) Length - make the wire longer*
 - 3) Diameter - make the wire thicker*
 - 4) Temperature - increase the temperature*

The Electrical Review, 1891 Electricity and Magnetism, 1993 **Motion, Forces** Prentice-Hall Staff, 1994
Reviewed in The Textbook Letter 3 4 94 **Electric Railway Review**, 1907 **Smart Robust Operation and Trading of Integrated Energy Systems with Low Pollution Goals** Kaiping Qu, Yue Zhou, Xin Fang, Shuli Wen, Shiwei Xie, 2024-09-23
To mitigate two major environmental concerns of global warming and air pollution renewable energies with uncertainty are increasingly deployed in power systems which challenge the system's secure operation. A single system usually has limited adjusting ability. In contrast, integrated energy systems such as electricity, gas, electricity, traffic, electricity, heat, and transmission distribution coordinated systems enhance the regulating ability of renewable energy accommodation and environmental protection. The operation of integrated energy systems will meet three essential requirements: low pollution, attribute robustness, and cooperativity. However, the diversity of uncertainty conditions, the complementarity of new energy accommodation among systems, the conflict of interest between systems, and the dispatch autonomy of systems challenge the requirements mentioned above. The main goal of this Research Topic includes:
1. Propose more effective trading mechanisms or control strategies for carbon and air pollutant emissions.
2. Fully use complementary effects between electric power, natural gas, heat, hydrogen, and traffic systems.
3. Realize the coordinated operation of integrated energy systems with limited information interaction and ensured dispatch autonomy.
4. Improve the robustness of integrated energy systems under diversified uncertainty conditions.
5. Apply data-based reinforcement learning methods for the dynamic decision of smart integrated energy systems under complex environments.
