A Healthcare Solution Mark A. Vonderembse, David D. Dobrzykowski, 2016-10-14 The evidence is undeniable By any measure the US spends more on healthcare than any other country in the world yet its health outcomes as measure by longevity are in the bottom half among developed countries and its health related quality of life has remained constant or declined since 1998 In addition to high costs and lower than expected outcomes the healthcare delivery system is plagued by treatment delays as it can take weeks to see a specialist and many people have limited or no access to care Part of the

challenge is that the healthcare delivery system is a large complex and sophisticated value creation chain. Successfully changing this highly interconnected system is difficult and time consuming because the underlying problems are hard to comprehend; the root causes are many; the solution is unclear; and the relationships among problems, causes, and solutions are multifaceted. To address these issues, the book carefully explains the underlying problems, examines their root causes, using information, data, and logic, and presents a comprehensive and integrated solution that addresses these causes. These three steps are the methodological backbone of this book. A solution depends on understanding and applying the principles of patient-centered care (PCC) and resource management. PCC puts patients supported by their primary care physicians back in the role as decision makers and depends on patients being responsible for their health, including making good life style choices. After all, the best way to reduce healthcare costs and increase quality of life is to improve our health and wellness, and as a result, need less care. In addition, health insurance must be rethought and redesigned so it is less likely to lead to overuse. For many people with health insurance, the out-of-pocket cost of healthcare is small, so healthcare decision making is often biased toward consumption. Effective resource management means that healthcare providers must do a better job of acquiring and using resources in order to provide care quickly, productively, and correctly. This means improving healthcare strategy and management, accelerating the use of information technology, making drug costs affordable and fair, reducing the incidence of malpractice, and rebuilding the provider network. In addition, implementation is difficult because there are many participants in the healthcare delivery value chain, such as physicians, nurses, and medical technicians, as well as many provider organizations, such as hospitals, clinics, physician offices, and labs. Further up the value chain, there are pharmaceutical companies, equipment providers, and other suppliers. These participants have diverse and sometimes conflicting goals, but each must be willing to accept change and work in a coordinated manner to improve healthcare. To overcome these problems, strong national leadership is needed to get the attention and support from the people and organizations involved in healthcare and to make the comprehensive changes that will lower healthcare costs, improve healthcare quality, eliminate delays, increase access, and enhance patient satisfaction. *Medical Informatics 20/20: Quality and Electronic Health Records through Collaboration, Open Solutions, and Innovation* Douglas Goldstein, Peter J.

Groen, Suniti Ponkshe, Marc Wine, 2007-01-04. Despite pressure from the private sector to market their own custom solutions, the healthcare industry is coming around to the idea of applying the strategies of collaboration, open solutions, and innovation to meet the ever-changing demands for healthcare information to support quality and safety. This book provides a roadmap for improving quality of care using Electronic Health Records (EHR) and interoperable, consumer-centric health information solutions. Improvement with Electronic Health Records Margret Amatayakul, 2017-07-27 Although physicians and hospitals are receiving incentives to use electronic health records EHRs there is little emphasis on workflow and process improvement by providers or vendors As a result many healthcare organizations end up with incomplete product specifications and poor adoption rates Process Improvement with Electronic Health Records **The Lean Electronic Health Record** Ronald G.

Bercaw, Kurt A. Knoth, MBA Snedaker, 2017-12-15 The Electronic Health Record EHR is a reflection of the way your organization conducts business If you re looking to make lasting improvements in the delivery of care you must start with looking at the system from your patient s perspective to understand what is of value and what is simply waste When you begin seeing in this way you ll begin building in this way When you begin building in this way you ll begin driving improvements in your care delivery Only then will your EHR be able to support lasting improvements driving better patient care and outcomes at lower costs Healthcare organizations are under increasing pressure to improve on all fronts This can be achieved but only by changing the very way we look at care No longer can we look at care just from the organization or provider s perspective we must start with the end in mind the patient Compelling case studies discussed throughout this book demonstrate that modifying processes and workflows using Lean methodologies lead to substantial improvements These changes must be undertaken in a clear consistent and methodical manner When implementing an EHR based on existing workflows and sometimes antiquated processes organizations struggle to sustain improvements Many organizations have deployed an EHR and now face optimization challenges including the decision to move to a new EHR vendor The financial implications of upgrading optimizing or replacing an EHR system are significant and laden with risk Choose the wrong vendor the wrong system or the wrong approach and you may struggle under the weight of that decision for decades Organizations that successfully leverage the convergence of needs patients demanding better care providers needing more efficient workflows and organizations desiring better financials will survive and thrive This book ties together current healthcare challenges with proven Lean methodologies to provide a clear concise roadmap to help organizations drive real improvements in the selection implementation and on going management of their EHR systems Improving patient care improving the provider experience and reducing organizational costs are the next frontier in the use of EHRs and this book provides a roadmap to that desired future state Registries for Evaluating Patient Outcomes U.S. Agency for Health Care Research and Quality/AHRQ, 2014-04-30 This User s Guide is intended to support the design implementation analysis interpretation and quality evaluation of registries created to increase understanding of patient outcomes For the purposes of this guide a patient registry is an organized system that uses observational study methods to collect uniform data clinical and other to evaluate specified outcomes for a population defined by a particular disease condition or exposure and that serves one or more predetermined scientific clinical or policy purposes A registry database is a file or files derived from the registry Although registries can serve many purposes this guide focuses on registries created for one or more of the following purposes to describe the natural history of disease to determine clinical effectiveness or cost effectiveness of health care products and services to measure or monitor safety and harm and or to measure quality of care Registries are classified according to how their populations are defined For example product registries include patients who have been exposed to biopharmaceutical products or medical devices Health services registries consist of patients who have had a common

procedure clinical encounter or hospitalization Disease or condition registries are defined by patients having the same diagnosis such as cystic fibrosis or heart failure The User s Guide was created by researchers affiliated with AHRQ s Effective Health Care Program particularly those who participated in AHRQ s DEcIDE Developing Evidence to Inform Decisions About Effectiveness program Chapters were subject to multiple internal and external independent reviews
