

Experiment 8

Logic Circuit Simplification

Objectives

After completing this experiment, you will be able to

- Develop the truth table for a BCD invalid code detector.
- Use a Karnaugh map to simplify the expression.
- Build and test a circuit that implements the simplified expression.
- Predict the effect of "faults" in the circuit.

Materials Needed

7400 NAND gate
LED
Resistors: one 330 Ω , four 1.0 k Ω
One 4-position DIP switch

Summary of Theory

With combinational logic circuits, the outputs are determined solely by the inputs. For simple combinational circuits, truth tables are used to summarize all possible inputs and outputs; the truth table completely describes the desired operation of the circuit. The circuit may be realized by simplifying the expression for the output function as read from the truth table.

A powerful mapping technique for simplifying combinational logic circuits was developed by M. Karnaugh and was described in a paper he published

in 1953. The method involved writing the truth table into a geometric map in which adjacent cells (squares) differ from each other in only one variable. (Adjacent cells share a common border horizontally or vertically.) When you are drawing a Karnaugh map, the variables are written in a Gray code sequence along the sides and tops of the map. Each cell on the map corresponds to one row of the truth table. The output variables appear as 0's and 1's on the map in positions corresponding to those given in the truth table.

As an example, consider the design of a 2-bit comparator. The inputs will be called A_2A_1 and B_2B_1 . The desired output is HIGH if A_2A_1 is equal to or greater than B_2B_1 . To begin, the desired output is written in the form of a truth table, as given in Table 8-1. All possible inputs are clearly identified by the truth table and the desired output for every possible input is given.

Next the Karnaugh map is drawn, as shown in Figure 8-1. In this example, the map is drawn using numbers to represent the inputs. The corresponding values for the output function are entered from the truth table. The map can be read in sum-of-products (SOP) form by grouping adjacent cells containing 1's on the map. The size of the groups must be an integer power of 2 (1, 2, 4, 8, etc.) and should contain only 1's. The largest possible group should be taken; all 1's must be in at least one group and may be taken in more than one group if helpful.

After grouping the 1's on the map, the output function can be determined. Each group is read as

oct 15 2022 the mechanisms and features of gold extraction with sulfur containing lixiviants are similar which all require oxidants and they act as ligands to complex with gold ions and form stable complexes in solution their properties are slightly different based on their own chemical properties and complex stability constants 3 1 1 thiosulfate

the chemistry of gold extraction request pdf researchgate - Aug 20 2022

jan 1 2006 this paper explores the use of alpha cyclodextrin $\alpha\text{-CD}$ for gold extraction from gold bearing ore in the democratic republic of congo d r c

comparative study of gold extraction from refractory pyritic - Mar 15 2022

may 7 2020 cyanide is the most widely used substance for gold extraction due to its relatively low cost effectiveness in dissolving gold and silver and selectivity for these metals dissolution of gold and silver requires oxidation 2 3 4 most commonly in cyanide leaching

gold mercury and silver extraction by chemical and physical - Oct 22 2022

nov 1 2016 articlegold mercury and silver extraction by chemical and physical separation methods gold mercury

and silver extraction by chemical and physical separation methods an agitation leaching method was used for gold extraction from aghdareh mine samples mineralogical study showed that 58 of the gold particles were finer than 10 μm
