Photosynthesis Worksheet

Date: _____

1. What is the overall reaction for photosynthesis?

2. How does this compare to the overall reaction for cellular respiration?

It is the reverse of the overall reaction for cellular respiration.

3. Where does the energy for photosynthesis come from?

from sunlight

4. What plant pigments are involved in photosynthesis?

chlorophyll a, chlorophyll b, and carotenoids

5. Explain why chlorophyll appears green to us in terms of what happens to different wavelengths of light that strike a chlorophyll molecule.

We see light that bounces off of objects (reflected light). Chlorophyll is best at trapping and absorbing the red – orange wavelengths of light and the blue, indigo, and violet wavelengths of light. It is not good at absorbing the green wavelengths. The green light is reflected, so it is the part we see. Therefore, chlorophyll looks green to us.

6. How does the amount of energy in light change as the wavelength increases?

As wavelength increases, amount of energy decreases. Thus, violet light (which has a shorter wavelength) has more energy than red light (which has a longer wavelength).

7. Which colors of light are most effective for photosynthesis? Explain why.

Chlorophyll looks green to us because most of the green wavelengths are reflected rather than being absorbed. For this reason, green light is not an effective color of light to power photosynthesis. Chlorophyll a and b together absorb light most effectively in the blue to violet range and the orange to red range. Since violet wavelengths have the most energy in the visible light range (due to their shorter wavelengths) they can provide the maximum energy for photosynthesis.

8. In what organelle of a plant cell does photosynthesis take place?

in the chloroplasts

9. What are the two stages of photosynthesis?

light reactions and Calvin cycle

10. In which part of the chloroplast does each stage occur?

The light reactions take place in the thylakoids.

The Calvin cycle takes place in the stroma.

11. What happens to water molecules in the light reactions?

Water molecules (H_2O) are split to give electrons, H^+ ions, and oxygen gas (O_2).

12. What photosynthesis waste product is formed in the light reactions?

oxygen gas (O_2)

William Schopf,2021-10-12 One of the greatest mysteries in reconstructing the history of life on Earth has been the apparent absence of fossils dating back more than 550 million years We have long known that fossils of sophisticated marine life forms existed at the dawn of the Cambrian Period but until recently scientists had found no traces of Precambrian fossils The quest to find such traces began in earnest in the mid 1960s and culminated in one dramatic moment in 1993 when William Schopf identified fossilized microorganisms three and a half billion years old This startling find opened up a vast period of time some eighty five percent of Earth s history to new research and new ideas about life s beginnings In this book William Schopf a pioneer of modern paleobiology tells for the first time the exciting and fascinating story of the origins and earliest evolution of life and how that story has been unearthed Gracefully blending his personal story of discovery with the basics needed to understand the astonishing science he describes Schopf has produced an introduction to paleobiology for the interested reader as well as a primer for beginning students in the field He considers such questions as how did primitive bacteria pond scum evolve into the complex life forms found at the beginning of the Cambrian Period How do scientists identify ancient microbes and what do these tiny creatures tell us about the environment of the early Earth And in a related chapter Schopf discusses his role in the controversy that swirls around recent claims of fossils in the famed meteorite from Mars Like all great teachers Schopf teaches the non specialist enough about his subject along the way that we can easily follow his descriptions of the geology biology and chemistry behind these discoveries Anyone interested in the intriguing questions of the origins of life on Earth and how those origins have been discovered will find this story the best place to start
