Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like $5 \times 7 = 12$ $17 \times 8 = 96$ $X \times 7 = 42$ and $56 \times 7 = 8$ and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget **Real-World Math Projects for Gifted Learners, Grades 4-5** Mark Hess, 2022-03-21 Helping bring mathematics and engineering to life these challenging lessons give teachers an exciting tool

Hyper Education Pawan Dhingra,2021-09-07 An up close look at the education arms race of after school learning academic competitions and the perceived failure of even our best schools to educate children Beyond soccer leagues music camps and drama lessons today s youth are in an education arms race that begins in elementary school In Hyper Education Pawan Dhingra uncovers the growing world of high achievement education and the after school learning centers spelling bees and math competitions that it has spawned It is a world where immigrant families vie with other Americans to be at the head of the class putting in hours of studying and testing in order to gain a foothold in the supposed meritocracy of American public education A world where enrichment centers like Kumon have seen 194 percent growth since 2002 and target children as young as three Even families and

teachers who avoid after school academics are getting swept up Drawing on over 100 in depth interviews with teachers tutors principals children and parents Dhingra delves into the why people participate in this phenomenon and examines how schools families and communities play their part Moving past Tiger Mom stereotypes he addresses why Asian American and white families practice what he calls hyper education and whether or not it makes sense By taking a behind the scenes look at the Scripps National Spelling Bee other national competitions and learning centers Dhingra shows why good schools good grades and good behavior are seen as not enough for high achieving students and their parents and why the education arms race is likely to continue to expand
