Climate Change and the Sustainable Financial Sector Olarewaju, Odunayo Magret, Ganiyu, Idris Olayiwola, 2021-06-25

Climate change is a major problem generating both risks and opportunities that will have a direct impact on the economy and the financial sector. In recent years, climate change has threatened both the survival of the financial system and economic development. The growing occurrence of extreme climate events combined with the imprudent nature of economic growth can cause unsustainable levels of harm to the financial sectors. On the other hand, it presents a range of new business challenges. In contrast to the most evident physical risks, companies are vulnerable to transformational risks that arise from the reaction of society to climate change, such as technological change, regulation, and markets that can boost the cost of doing business, threats to the profitability of existing goods, or effects on the value of the asset. Climate change also offers new business opportunities, and it has made research in the context of a sustainable financial sector indispensable. The Handbook of Research on Climate Change and the Sustainable Financial Sector focuses on the impacts of climate change on various sectors of the world economy. This book covers how businesses can improve their sustainability, the impact of climate change on the financial sector, and specifically the impacts on financial services, supply chains, and the socio-economic status of the world. Beyond focusing on the impacts to the financial industry itself, this book assesses how climate change in the financial sector affects the well-being of society in areas such as unemployment, economic recessions, decreases in consumer purchases, and more. This book is essential for stockbrokers, business managers, directors, fund managers, financial analysts, consultants, and actuaries, institutional investors, policymakers, practitioners, researchers, academicians, and students interested in a comprehensive view of the impact of climate change on the financial sector.

Corporate Reporting Kevin Christopher Carduff, 2022-10-28. Volume 26 of Studies in the Development of Accounting Thought was written by the late Professor Kevin Christopher Carduff, who taught at several institutions including Case Western Reserve University and the College of Charleston.

Persistence and Vigilance Yvette J. Lazdowski, 2020-11-02. This accounting history study follows the major chronological events in the first 50 years of the Ford Motor Company from the perspective of accounting procedures and financial reporting. Several key business executives are profiled along with their contributions to the implementation and maintenance of financial structures and policies.

Materials and Innovative Product Development Gernot H. Gessinger, 2009-06-29. Innovation in product design starts with materials. Developing successful commercial products demands a sound understanding of the materials that go into those products: their uses, their costs, their lifetime performance. However, the valuable knowledge of materials engineers is often not fully leveraged in the creative phase of the product design cycle. Gessinger seeks to bridge this gap that exists in many companies. Written from the bottom-up perspective of the engineer or scientist on a product design team, Materials and Innovative Product Design introduces business economics and strategic product development to the materials specialist and demystifies materials selection for other members of the design team and manufacturing management. Using case studies from innovative organizations such as ABB and successful start-ups,

such as NDC Day4Energy and Metoxit Gessinger illustrates how the integration of different engineering and business disciplines can power innovation in the design process By addressing the real world needs of innovators this book allows the reader to unlock the potential of the new material types that have been changing the face of product design and deploy an integrated business approach to materials selection and the design process Allows engineers to develop a fuller understanding of economics and business objectives in order to contribute more effectively to innovative product design Introduces the business opportunities and practical challenges of deploying new material types to design and manufacturing management Illustrates how to harness the power of R D within the design cycle through case studies of innovative and successful organizations that have brought new materials technologies to known markets and known materials to new markets
