

Learning Objectives

in this manner, students needed the Pythagorean Theorem (already using area models) while seeking solutions to algebra. In addition, students apply the Pythagorean Theorem by constructing triangles and explore the relationships between distance, number triangles, and the Pythagorean Theorem. Students apply the Pythagorean Theorem and Pythagorean triples in real-world contexts in their activities.

12.0	Geometric structures: The student applies geometric relationships in order to make and verify conjectures.
12.001	Make comparisons about angles, lines, polygons, circles, and three-dimensional figures and determine the validity of the conjectures, illustrating that a variety of applications such as coordinate, transformations, or symmetry.
12.0	Geometric patterns: The student uses a variety of representations to describe geometric relationships and solve problems.
12.002	Use inductive and geometric patterns to make generalizations about geometric properties, including properties of polygons, ratios in similar figures and solids, and angle relationships in polygons and circles.
12.003	Identify and apply patterns from right triangles to solve meaningful problems, including special right triangles (45-45-90 and 30-60-90) and triangles whose sides are Pythagorean triples.
12.0	Congruence and the geometry of area: The student uses tools to determine measurements of geometric figures and make valid measurements attempts to find perimeter, area, and volume to problem situations.
12.004	Define, extend, and use the Pythagorean Theorem.
12.005	Similarity and the geometry of shape: The student applies the concepts of similarity to justify properties of figures and solve problems.
12.006	Describe, apply, and justify triangle similarity relationships, such as right triangle ratios, trigonometric ratios, and Altitude-on-Hypotenuse using a variety of methods.
