**Use this experiment to answer questions 9-12.**

I want to know if my dogs will eat faster if I add carrots or apples to my dog's kibble. I think that if I add apples to their kibble, the dogs will eat the food the quickest. I will feed them 2 cups of food twice every day, for three months. I will also feed them in the same bowls, in the same location, and at the same time every day. One month I will feed them just kibble with nothing added into it, the next month I will feed them kibble and carrots, and the third month I will feed them kibble and apples. No matter what I add to the kibble, the total amount of food will still be 2 cups. I will measure how fast they are eating their food to determine if putting carrots or apples in their food makes them eat faster.

9. What is the dependent variable?
- The different types of food
  - The food with just kibble
  - The time it takes them to eat their food
  - The amount of food they are receiving every day
10. What is the independent variable?
- The different types of food
  - The food with just kibble
  - The time it takes them to eat their food
  - The amount of food they are receiving every day
11. What is the control?
- The different types of food
  - The food with just kibble
  - The time it takes them to eat their food
  - The amount of food they are receiving every day
12. Which is not a constant?
- The time it takes them to eat the food
  - The location where they are eating
  - The time of day they eat
  - The amount of food
