

OVERVIEW

The Human Development Index (HDI) is a statistic composite of development indicators (such as GDP, life expectancy, and others) and used to rank countries into four tiers of human development. HDI takes into account many different indicators that cover edu., health, & quality of life. For future reference, there are two main types of correlations:

- Positive correlations happen when two things are at the same level at the same time or move simultaneously (either one thing is high, the other is high or when one is low, the other is also low)
- Negative correlations happen when two things are at opposite levels simultaneously or move in opposite directions (either one thing is high, the other is low)
