technology as a subordinate aspect in business process management for experts to handle by contrast computer science professionals often consider business goals and organizational regulations as terms that do not deserve much thought but require the appropriate level of abstraction Matthias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management To this end he details the complete business process lifecycle from the modeling phase to process enactment and improvement taking into account all different stakeholders involved After starting with a presentation of general foundations and abstraction models he explains concepts like process orchestrations and choreographies as well as process properties and data dependencies Finally he presents both traditional and advanced business process management architectures covering for example workflow management systems service oriented architectures and data driven approaches In addition he shows how standards like WfMC SOAP WSDL and BPEL fit into the picture This textbook is ideally suited for classes on business process management information systems architecture and workflow management This 3rd edition contains a new chapter on business decision modelling covering the Decision Model and Notation DMN standard the chapter on process choreographies has been streamlined and numerous clarifications have been fetched throughout the book The accompanying website [www.bpm-book.com](http://www.bpm-book.com) contains further information and additional teaching material
