optimization of workflow and work systems      Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries Shmelova, Tetiana, Sikirda, Yuliya, Sterenharz, Arnold, 2019-10-11 With the emergence of smart technology and automated systems in today's world artificial intelligence AI is being incorporated into an array of professions. The aviation and aerospace industry specifically is a field that has seen the successful implementation of early stages of automation in daily flight operations through flight management systems and autopilot. However, the effectiveness of aviation systems and the provision of flight safety still depend primarily upon the reliability of aviation specialists and human decision making. The *Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries* is a pivotal reference source that explores best practices for AI implementation in aviation to enhance security and the ability to learn, improve, and predict. While highlighting topics such as computer-aided design, automated systems, and human factors, this publication explores the enhancement of global aviation security as well as the methods of modern information systems in the aeronautics industry. This book is ideally designed for pilots, scientists, engineers, aviation operators, air crash investigators, teachers, academicians, researchers, and students seeking current research on the application of AI in the field of aviation.

*Flying in the Face of Criminalization* Sofia Michaelides-Mateou, Andreas Mateou, 2016-04-15 Two parallel investigations take place after every aviation accident: one technical, one judicial. The former must be conducted with the sole intention of making safety recommendations to prevent the recurrence of similar accidents. The judicial investigation, however, has the intention of identifying those parties that have been at fault and to apportion blameworthiness for criminal and civil liability. Consequently, this results in a predicament for those parties that have been identified as having played a role in the accident: a dilemma between not supplying information aimed at enhancing safety and preventing future accidents and, on the other hand, supplying such information which may possibly be used against them in subsequent criminal prosecution. The situation is compounded by inconsistent approaches between different legal systems: aviation professionals may find themselves faced with criminal charges in one country but not in another, and they may also be unsure as to whether statements given during the technical investigation could be used against them in a court of law. Aviation safety is to a large extent built upon the trust placed by pilots, ATCOs, and other aviation professionals in the process of accident investigation. This book examines the growing trend to criminalize these same people following an accident investigation and considers the implications this has for aviation safety.
