**Aviation in Crisis** Ruwantissa Abeyratne, 2017-11-22 This title was first published in 2003 The events of 11 September 2001 defy modern economic theory when addressed in aviation terms Economic theory would suggest that once the impact of such events are a thing of the past and economies are restored to their status quo ante a rise in the gross domestic product of States to earlier levels would almost inevitably result in increased consumption This in turn would mean that the demand for air travel would rise to earlier proportions and consumption in terms of air transport services would be restored to normalcy However the September attacks on United States property introduced a unique characteristic through the fear factor that directly impacts the future development of air transport As a result the grim task of restoration of passenger confidence stands in the way of economic revival of the air transport industry Aviation was always in crisis The air transport industry even prior to 11 September 2001 although seemingly a glamorous exciting and prosperous business never enjoyed sustained periods of profitability Even among the large carriers a short bout of profitability would inevitably be followed by a period of downturn in real income It is simply that this fluctuation in fortune is an ineluctable characteristic of air transport whose fortunes are dictated by rigid regulation competition and technological change If a sustained analysis were to be made of air transport plain economic theory would no longer be the exclusive discipline for consideration Rather all relevant factors have to be taken in context and emerging issues should be analyzed as possible threats to the economic well being of

the air transport industry This book addresses issues in a post September 2001 context but also analyses issues past and present with the intent of looking at the future Four major areas are taken into consideration which were in crisis but are truly impacted by the events of September 2001 These areas relate to crises in the commercial security insurance and environmental protection fields Of these the first and fourth areas are inextricably intertwined as aircraft noise regulations in various States have a direct impact on aircraft financing which in turn is linked to demand for air services A drop in demand for air services would essentially mean that the demand for lease or purchase of new aircraft would drop When this occurs air transport enterprises would be more inclined to cut costs and therefore concentrate on using the aircraft already at hand upgrading them to conform to the The purpose of this book is to view the overall picture of an aviation industry comprising air transport and other aviation related industries in crisis through issues that continue to impact the economic viability of air transport particularly as a result of the events of 11 September 2001 *Federal Register*, 1976-07 Air Navigation Law Ruwantissa Abeyratne, 2012-03-05 The aviation community in which the International Civil Aviation Organization ICAO the International Air Transport Association IATA and the Civil Air Navigation Services Organization CANSO play leading roles is hard at work in bringing aviation into the 21st Century In doing so the United States and Europe have taken proactive steps forward in introducing modernization particularly in moving towards more efficient air traffic management systems within NextGen and SESAR Elsewhere in the fields of personnel licensing rules of the air accident investigation and aeronautical charts and information significant strides are being made in moving from mere regulation to implementation and assistance calculated to make all ICAO member States self sufficient in international civil aviation However these objectives can be achieved only if the aviation industry has a sustained understanding of the legal and regulatory principles applying to the various areas of air navigation This book provides that discussion Some of the subjects discussed in this book are sovereignty in airspace flight information and air defence identification zones rules of the air personnel licensing meteorological services operations of aircraft air traffic services accident and incident investigation aerodromes efficiency aspects of aviation and environmental protection aeronautical charts and information the carriage of dangerous goods and NextGen and SESAR Except for NextGen and SESAR these subjects form the titles of the Annexes to the Chicago Convention that particularly involve the rights and liabilities of the key players involved in air navigation
