Principles of Sustainable Business Rob van Tulder, Eveline van Mil, 2022-11-04 The basic function of companies is to add value to society Profits are a means to an end not an end in itself The ability of companies to innovate scale and invest provides them with a powerful base for positive change But companies are also criticized for not contributing sufficiently to society's grand challenges An increasingly VUCA Volatile Uncertain Complex and Ambiguous world creates serious governance gaps that not only require new ways of regulation but also new ways of doing business Can companies effectively contribute to sustainable development and confront society's systemic challenges Arguably the most

important frame to drive this ambition was introduced and unanimously adopted in 2015 the Sustainable Development Goals (SDGs). The SDG agenda not only defines a holistic set of global goals and targets but also foundational principles to guide meaningful action to their achievement by 2030. Multinational companies have signed up to the SDGs as the world's long term business plan. Realizing the SDGs provides a yearly 12 trillion investment and growth opportunity while creating hundreds of millions of jobs in the process. But progress is too slow, witnessing society's inability to deal with pressing human, ecological, economic and health crises whilst the vast potential for societal value creation remains underutilized. This book provides a timely account of the systemic strategic and operational challenges that need to be addressed to enhance the effectiveness of corporate involvement in society by using the SDGs as the leading principles based framework for actionable powerful and transformative change. *Principles of Sustainable Business* is written for graduate and postgraduate executive students, policymakers and business professionals who want to understand the complex challenges of global sustainability. It shows how companies can design and implement SDG relevant strategies at three levels: the macro level to assess whether the SDGs present wicked problems or opportunities; the micro level to develop and operationalize innovative business models; design new business cases and navigate organizational transition trajectories; and the meso level to develop fit for purpose cross sector partnering strategies. *Principles of Sustainable Business* presents innovative tools embedded in a coherent sequence of analytical frameworks that can be applied in courses for students, be put into practice by business professionals and used by action researchers to help companies contribute to the Decade of Action.

Output of the Langley Research Center for Calendar Year 1984, 1985 **Aerothermodynamics of Turbomachinery**

Naixing Chen, 2011-09-23. Computational Fluid Dynamics (CFD) is now an essential and effective tool used in the design of all types of turbomachine and this topic constitutes the main theme of this book. With over 50 years of experience in the field of aerodynamics, Professor Naixing Chen has developed a wide range of numerical methods covering almost the entire spectrum of turbomachinery applications. Moreover, he has also made significant contributions to practical experiments and real life designs. The book focuses on rigorous mathematical derivation of the equations governing flow and detailed descriptions of the numerical methods used to solve the equations. Numerous applications of the methods to different types of turbomachine are given and in many cases the numerical results are compared to experimental measurements. These comparisons illustrate the strengths and weaknesses of the methods, a useful guide for readers. Lessons for the design of improved blading are also indicated after many applications. Presents real world perspective to the past, present and future concern in turbomachinery. Covers direct and inverse solutions with theoretical and practical aspects. Demonstrates huge application background in China. Supplementary instructional materials are available on the companion website. *Aerothermodynamics of Turbomachinery Analysis and Design* is ideal for senior undergraduates and graduates studying in the fields of mechanics, energy and power and aerospace engineering design engineers in the business of manufacturing compressors, steam and gas

turbines and research engineers and scientists working in the areas of fluid mechanics aerodynamics and heat transfer
