Global Land Ice Measurements from Space Jeffrey S. Kargel, Gregory J. Leonard, Michael P. Bishop, Andreas Kääb, Bruce H. Raup, 2014-07-08 An international team of over 150 experts provide up to date satellite imaging and quantitative analysis of the state and dynamics of the glaciers around the world and they provide an in depth review of analysis methodologies Includes an e published supplement Global Land Ice Measurements from Space Satellite Multispectral Imaging of Glaciers GLIMS book for short is the leading state of

the art technical and interpretive presentation of satellite image data and analysis of the changing state of the world's glaciers. The book is the most definitive comprehensive product of a global glacier remote sensing consortium, Global Land Ice Measurements from Space (GLIMS) (<http://www.glims.org>). With 33 chapters and a companion e-supplement, the world's foremost experts in satellite image analysis of glaciers analyze the current state and recent and possible future changes of glaciers across the globe and interpret these findings for policy planners. Climate change is with us for some time to come and its impacts are being felt by the world's population. The GLIMS Book, to be released about the same time as the IPCC's 5th Assessment report on global climate warming buttresses and adds rich details and authority to the global change community's understanding of climate change impacts on the cryosphere. This will be a definitive and technically complete reference for experts and students examining the responses of glaciers to climate change. World experts demonstrate that glaciers are changing in response to the ongoing climatic upheaval in addition to other factors that pertain to the circumstances of individual glaciers. The global mosaic of glacier changes is documented by quantitative analyses and are placed into a perspective of causative factors. Starting with a Foreword, Preface and Introduction, the GLIMS book gives the rationale for and history of glacier monitoring and satellite data analysis. It includes a comprehensive set of six 'how to' methodology chapters, twenty-five chapters detailing regional glacier state and dynamical changes, and an in-depth summary and interpretation chapter placing the observed glacier changes into a global context of the coupled atmosphere-land-ocean system. An accompanying e-supplement will include oversized imagery and other highly visual renderings of scientific data.

The Oxford Handbook of the Archaeology of the Contemporary World Paul Graves-Brown, Rodney Harrison, Angela Piccini, 2013-10-17. It has been clear for many years that the ways in which archaeology is practised have been a direct product of a particular set of social, cultural and historical circumstances; archaeology is always carried out in the present. More recently, however, many have begun to consider how archaeological techniques might be used to reflect more directly on the contemporary world itself, how we might undertake archaeologies of as well as in the present. This Handbook is the first comprehensive survey of an exciting and rapidly expanding sub-field and provides an authoritative overview of the newly emerging focus on the archaeology of the present and recent past. In addition to detailed archaeological case studies, it includes essays by scholars working on the relationships of different disciplines to the archaeology of the contemporary world, including anthropology, psychology, philosophy, historical geography, science and technology studies, communications and media, ethnoarchaeology, forensic archaeology, sociology, film, performance and contemporary art. This volume seeks to explore the boundaries of an emerging sub-discipline, to develop a tool kit of concepts and methods which are applicable to this new field, and to suggest important future trajectories for research. It makes a significant intervention by drawing together scholars working on a broad range of themes, approaches, methods and case studies from diverse contexts in different parts of the world which have not previously been considered collectively.
