Re-imagining Economic Sociology Patrik Aspers, Nigel Dodd, 2015
The purpose of this book is to explore new developments in the field of economic sociology. It contains cutting edge theoretical discussions by some of the world's leading economic sociologists with chapters on topics such as the economic convention, relational sociology, economic identity, economy and law, economic networks and institutions. The book is distinctive in a number of ways. First, it focuses on theoretical contributions by pulling together and extending what the contributors believe to be the most important theoretical innovations within their own particular areas of the field. Second, there are contributions by leading economic sociologists from both the US and Europe which gives the book both wider scope and appeal while also creating the opportunity for some interesting dialogue between distinct theoretical traditions. The book will be of interest to researchers, Ph.D. students and advanced students on both sides of the Atlantic and indispensable in advanced economic sociology courses.

A Research Agenda for Critical Political Economy Bill Dunn, 2020-09-25
Forward thinking and provocative, this Research Agenda demonstrates different approaches to the field from experts focusing on global and local and historical and contemporary issues. Eminent global scholars examine a diverse selection of interdisciplinary themes, raising questions surrounding future research, offering examples and linking the theory to its implications for practice and policy.

Hollowed Out David Madland, 2015-06-24
For the past several decades, politicians and economists thought that high levels of inequality were good for the economy. But because America's middle class is now so weak, the US economy suffers from the kinds of problems that plague less developed countries. As *Hollowed Out* explains, to have strong, sustainable growth, the economy needs to work for everyone and expand from the middle out. This new thinking has the potential to supplant trickle-down economics, the theory that was so wrong about inequality and our economy and shape economic policymaking for generations.

Law, Migration, and the Construction of Whiteness Dagmar Rita Myslinska, 2024-03-15
This book addresses the hidden dynamics of race within the European Union. Brexit supporters' frequent targeting of European Union (EU) movers, especially those from Central and Eastern Europe, has been popularly assumed as at odds with the EU project's foundations based on equality and inclusion. This book dispels that notion. By interrogating the history, wording, omissions, assumptions, and applications of laws, policies, and discourses pertinent to mobility and equality, the argument developed throughout the book is that the parameters of CEE nationals' status within the

EU have been closely circumscribed in line with the entrenched historical positioning of the west as superior to the east Engaging current legal economic political and moral issues against the backdrop of Brexit and contestations over EU integration and globalisation this work opens avenues of thought to better understand law s role in producing and sustaining social stratifications Europe is a postcolonial space as this book demonstrates By addressing fractures within the construct of whiteness that are based on ethnicity class and migrant status the book also provides a theoretically nuanced and politically useful understanding of contemporary European racisms This book will appeal to scholars students and others interested in migration EU integration and EU citizenship equality law race and ethnicity social policy and postcolonialism

The UK Regional-National Economic Problem Philip McCann,2016-03-10 In recent years the United Kingdom has become a more and more divided society with inequality between the regions as marked as it has ever been In a landmark analysis of the current state of Britain s regional development Philip McCann utilises current statistics examines historical trends and makes pertinent international comparisons to assess the state of the nation The UK Regional National Economic Problem brings attention to the highly centralised top down governance structure that the UK deploys and demonstrates that it is less than ideally placed to rectify these inequalities The North South divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity incomes employment status and wealth Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland in contrast the Midlands the North of England Northern Ireland and Wales lag behind by most measures of prosperity This inequality is greatly limiting national economic

performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored. The UK's economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends although this definitive study suggests that some areas of improvement are possible if they are well implemented. This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government.

Capacity Mechanisms in the EU Energy Market Leigh Hancher, Adrien de Hauteclocque, Malgorzata Sadowska, 2015-09-24

Ensuring an adequate long term energy supply is a paramount concern in Europe. EU member states now intervene by encouraging investment in generation capacity offering an additional revenue stream for conventional power plants in addition to the existing heavily subsidised investments in renewable energy sources. These capacity remuneration mechanisms or simply capacity mechanisms have become a hot topic in the wider European regulatory debate. European electricity markets are increasingly interconnected so the introduction of a capacity mechanism in one country not only distorts its national market but may have unforeseeable consequences for neighbouring electricity markets. If these mechanisms are adopted by several member states with no supra national coordination and no consideration for their cross border impact they may cause serious market distortions and put the future of the European internal electricity market at risk. This book provides readers with an in depth analysis of capacity mechanisms written by an expert team of policy makers, economists and legal professionals. It will be a first point of reference for regulators and policy makers responsible for designing optimal capacity mechanisms in Europe and will be an invaluable resource for academics and practitioners in the fields of energy regulation and competition.
