**Windplant No.1, 115 Megawatt Windpower Project, Klickitat County**, 1995. Exploring Cats: Their Behaviors and Human-Cat Interactions Lynette Arnason Hart, Benjamin Hart, Emma Kathryn Grigg, Leslie Ann Lyons, Dennis Clair Turner, 2023-12-27. Cats exceed dogs in their numbers as companion animals in the U.S. and much of Europe despite them not filling working roles. In the past, their prowess as mousers on farms sometimes made them essential, but these days many cats lead leisurely lives in people's homes. What accounts for them becoming such appreciated family members? What are their behaviors that are so enticing? Exactly how do they respond to us? When are they preferred companion animals more than dogs? What do we know about cultural differences in views about cats? Their growing popularity and the relative paucity of data about owned cats living in homes emphasizes the importance of monitoring their welfare. The anthrozoological research literature on companion animals includes extensive studies of dogs while contributing relatively few close looks at the special behaviors and traits of domestic cats that make them so desirable as companions. We know little about the dynamics of our interactions with cats and the attachment shared with them, which may differ in some ways from those we have with dogs. Nor have we identified the specific contexts where cats are particularly or uniquely compatible. How does the type of attachment affect and shape the bond relationship between human and cat? How are cats as emotional support animals for people with special needs, especially autism? What new information do we have about the cognitive abilities of domestic cats and how these abilities shape cats' behavior and relationships with humans? How do early life experiences of cats influence their behavior as adults or their successful integration into human households? Do cats fit best in certain residential settings or with specific types or ages of people? This Research Topic provides an opportunity to update our understanding on the special qualities and behaviors of cats and to scrutinize our mutual interactions with these companions. **Riding the Tiger** John Seidensticker, Peter Jackson, Sarah Christie, 1999-02-08. Beauty, grace, and power make the tiger one of the world's most loved animals, yet it is precisely these qualities that have been its downfall. Poaching for skins and body parts, loss of habitat, and prey, and conflicts between people and wild tigers have caused catastrophic declines in tiger numbers throughout their range.

If wild tigers are to survive through the next century we must act now *Riding the Tiger* is a comprehensive scientific and eminently readable account of the problems and possible solutions of securing a future for wild tigers Lavishly illustrated in full colour it is written by leading conservationists working throughout Asia It is a vital information resource for tiger conservationists in the field necessary reading for serious students of carnivore conservation and conservation biologists in general and an accessible overview of tiger conservation for general readers Field Guide to Beetles of California Arthur V. W. Fisher,Thomas S. Bellows,L. E. Caltagirone,D. L. Dahlsten,Carl B. Huffaker,G. Gordh,1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control *Reintroduction of Top-Order Predators* Matt W. Hayward,Michael Somers,2009-04-13 Large predators are among the most threatened species on the planet and ways of conserving them in the face of increasing human populations and associated resource requirements are becoming critical This book draws upon the experiences of some of the world s foremost large carnivore specialists to discuss the numerous issues associated reintroducing large predators back into their natural habitats Reviews of internationally renowned reintroduction programs for wolves European lynx and African wild dog reveal the successes and failures of these actions Experts on tigers snow leopards and jaguars contend that there are other conservation options of higher priority that will ensure their security in the long term Other experts discuss more theoretical aspects such as whether we know enough about these species to be able to predict their behavioural or ecological response to the reintroduction process Social economic political and genetic considerations are also addressed *Pesticides Documentation Bulletin* ,1967
