Final Cut Pro interface overview

Here are the main areas of the Final Cut Pro window:

Library browser

Viewer

Inspector

Organize media in the Library browser and the browser

Your imported media is available in events in your library. An event is like a folder that contains clips and projects.

When you select an event in a library, its clips and projects appear in the browser on the right.

Play back clips and projects in the viewer

The viewer is where you play back your video, including clips and projects with full resolution and sound. You can play back projects, projects, or individual clips in full-screen view or on a second display. With the event viewer, a separate video display that can be shown next to the main viewer, you can display two clips at the same time: one from the browser and one from the timeline. For information about ways to play media, see [Play back media](#).

Apple Inc.

Organize the timeline using audio lanes

With a few clicks, you can arrange audio clips into audio lanes in the timeline, based on their key assignments. Audio has an automatic, visually-placed layout in the timeline. This organizes audio clips clearly and provides convenient controls for editing audio and more efficient.

Organizing the timeline in this way does not affect the way your project is how it plays back in the viewer and simplifies the timeline experience for your editing convenience.

Notes: When you display audio clips in separate lanes in the timeline, any clips that contain both audio and video are expanded to show audio and video separately.
