stunning graphics run with minimum hardware requirements We begin with a brief introduction to the Vulkan system and show you its distinct features with the successor to the OpenGL API First you will see how to establish a connection with hardware devices to query the available queues memory types and capabilities offered Vulkan is verbose so before diving deep into programming you ll get to grips with debugging techniques so even first timers can overcome error traps using Vulkan s layer and extension features You ll get a grip on command buffers and acquire the knowledge to record various operation commands into command buffer and submit it to a proper queue for GPU processing We ll take a detailed look at memory management and demonstrate the use of buffer and image resources to create drawing textures and image views for the presentation engine and vertex buffers to store geometry information You ll get a brief overview of SPIR V the new way to manage shaders and you ll define the drawing operations as a single unit of work in the Render pass with the help of attachments and subpasses You ll also create frame buffers and build a solid graphics pipeline as well as making use of the synchronizing mechanism to manage GPU and CPU hand shaking By the end you ll know everything you need to know to get your hands dirty with the coolest Graphics API on the block What you will learn Implement device command buffer and queues to get connected with the physical hardware Get a grip on memory management to control host and device memory operations Understand and implement buffer and image resource types in Vulkan Define drawing operations in the Render pass and implement graphics pipeline Learn the drawing process manage resources with synchronization objects and render 3D scene output on screen with Swapchain Bring realism to your rendered 3D scene with textures and implement linear and optimal textures Who this book is for This book is ideal for graphic programmers who want to get up and running with Vulkan It s also great for programmers who have experience with OpenGL and other graphic APIs who want to take advantage of next generation APIs A good knowledge of C C is expected *Motif Programming* Marshall Brain,1992
