Attachments R. E. Vining, 1961 Developing and Validating Test Items Thomas M. Haladyna, Michael C. Rodriguez, 2013-07-18 Since test items are the building blocks of any test learning how to develop and validate test items has always been critical to the teaching learning process As they grow in importance and use testing programs increasingly supplement the use of selected response multiple choice items with constructed response formats This trend is expected to continue As a result a new item writing book is needed one that provides comprehensive coverage of both types of items and of the validity theory underlying them This book is an outgrowth of the author's previous book *Developing and Validating Multiple Choice Test Items* 3e Haladyna 2004 That book achieved distinction as the leading source of guidance on creating and validating selected response test items Like its predecessor the content of this new book is based on both an extensive review of the literature and on its author's long experience in the testing field It is very timely in this era of burgeoning testing programs especially when these items are delivered in a computer based environment Key features include Comprehensive and Flexible No other book so thoroughly covers the field of test item development and its various applications Focus on Validity Validity the most important consideration in testing is stressed throughout and is based on the Standards for Educational and Psychological Testing currently under revision by AERA APA and NCME Illustrative Examples The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items Strategies for training item writers and developing large numbers of items using algorithms and other item generating methods are also presented Based on Theory and Research A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors *Experiments In Mathematics Using Maple* Christopher T.J. Dodson, Elizabeth A. Gonzalez, 2012-12-06 We believe that to understand and be comfortable with mathematical concepts and methods it is necessary to do mathematics and traditionally doing meant with a pencil and paper Now a modest home computer can provide a platform for a computer algebra package like Maple which can perform all of the operations encountered in secondary school mathematics and beyond and provide graphical representations of functions including animations The capability of rendering accurate graphics for mathematical functions greatly enhances the learning experience and helps intuition work in new situations before beginning to do the algebra and calculus needed to solve a problem For example if you can see that a function has a clear minimum from its graph then you are more likely to be able to identify its location precisely by analysis This book is designed to support the interactive Maple worksheets that we have developed for the two senior secondary school years and made available via the Internet at the anonymous ftp site ftp.utoronto.ca/pub/ednet/maths/maple This takes you from basic algebra functions and sequences to calculus and its applications Thus the book is a hardcopy version of the worksheets with additional explanatory text cross referencing appendices containing worked solutions to all exercises and indexing Small Specimen Test Techniques Mikhail Sokolov, John D.
