Barth, Herman Deconinck, 2013-03-09 The development of high order accurate numerical discretization techniques for irregular domains and meshes is often cited as one of the remaining chal lenges facing the field of computational fluid dynamics In structural me chanics the advantages of high order finite element approximation are widely recognized This is especially true when high order element approximation is combined with element refinement h p refinement In computational fluid dynamics high order discretization methods are infrequently

used in the computation of compressible fluid flow The hyperbolic nature of the governing equations and the presence of solution discontinuities makes high order ac curacy difficult to achieve Consequently second order accurate methods are still predominately used in industrial applications even though evidence suggests that high order methods may offer a way to significantly improve the resolution and accuracy for these calculations To address this important topic a special course was jointly organized by the Applied Vehicle Technology Panel of NATO's Research and Technology Organization RTO the von Karman Institute for Fluid Dynamics and the Numerical Aerospace Simulation Division at the NASA Ames Research Cen ter The NATO RTO sponsored course entitled Higher Order Discretization Methods in Computational Fluid Dynamics was held September 14 18 1998 at the von Karman Institute for Fluid Dynamics in Belgium and September 21 25 1998 at the NASA Ames Research Center in the United States Plasma Kinetics in Atmospheric Gases M.
