

19. A

Remember that the net force (in this case, the sum of tension and gravitational force) is always equal to the centripetal force,

$$T_1 + mg = \frac{mv^2}{r}$$

At the highest point, tension, and gravity act in the same direction, so the above equation applies:

$$T_1 = \frac{mv^2}{r} - mg$$

However, at the lowest point, mg acts downward while tension acts upwards towards the center, so

$$T_2 = \frac{mv^2}{r} + mg$$

These represent the two extremes of direction for tension and gravity. We can therefore say that tension is highest at the lowest point, option **A**.

20. A **[Memorize]** For alpha (α), beta (β) and gamma (γ) particles:

For penetrating ability:

$$\alpha < \beta < \gamma$$

For ionizing power:

$$\gamma < \beta < \alpha$$

Therefore, the correct answer is option **A**.

21. B An alpha particle adds 4 to the mass number (14 for N) and 2 to the atomic number (7 for N). As a proton is also produced, we remove one from the mass number and one from the atomic number. The result has a mass number of 17 and atomic number of 8, which corresponds to **B**.
