Analysis and Design of Transmitarray Antennas Ahmed H. Abdelrahman,Fan Yang,Atef Z. Elsherbeni,Payam Nayeri,2022-06-01 In recent years transmitarray antennas have attracted growing interest with many antenna researchers Transmitarrays combines both optical and antenna array theory leading to a low profile design with high gain high radiation efficiency and versatile radiation performance for many wireless communication systems In this book comprehensive analysis new methodologies and novel designs of transmitarray antennas are presented Detailed analysis for the design of planar space fed array antennas is presented The basics of aperture field distribution and the analysis of the array elements are described The radiation performances directivity and gain are discussed using array theory approach and the impacts of element phase errors are demonstrated The performance of transmitarray design using multilayer frequency selective surfaces M FSS approach is carefully studied and the transmission phase limit which are generally independent from the selection of a specific element shape is revealed The maximum transmission phase range is determined based on the number

of layers substrate permittivity and the separations between layers In order to reduce the transmitarray design complexity and cost three different methods have been investigated As a result one design is performed using quad layer cross slot elements with no dielectric material and another using triple layer spiral dipole elements Both designs were fabricated and tested at X Band for deep space communications Furthermore the radiation pattern characteristics were studied under different feed polarization conditions and oblique angles of incident field from the feed New design methodologies are proposed to improve the bandwidth of transmitarray antennas through the control of the transmission phase range of the elements These design techniques are validated through the fabrication and testing of two quad layer transmitarray antennas at Ku band A single feed quad beam transmitarray antenna with 50 degrees elevation separation between the beams is investigated designed fabricated and tested at Ku band In summary various challenges in the analysis and design of transmitarray antennas are addressed in this book New methodologies to improve the bandwidth of transmitarray antennas have been demonstrated Several prototypes have been fabricated and tested demonstrating the desirable features and potential new applications of transmitarray antennas
