Geography Education for Global Understanding Ali Demirci, Rafael de Miguel González, Sarah Witham

Bednarz, 2018-04-26 This book presents the core concepts of geographical education as a means of understanding global issues from a spatial perspective. It treats education supported by high standards, approaches, methodologies, and resources as essential in exploring the interactions of the world's human and environmental systems at local, regional, and global scales embedded in the nature of the discipline of geography. It covers topics such as climate change, sustainable development goals, geopolitics in an uncertain world, global crisis, and population flows, which are of great interest to geography researchers and social sciences educators who want to explore the complexity of contemporary societies. Highly respected scholars in geography education answer questions on key topics and explain how global understanding is considered in K-12 education in significant countries around the globe. The book discusses factors such as the Internet, social media, virtual globes, and other technological developments that provide insights into and visualization in real time of the intensity of relationships between different countries and regions of the earth. It also examines how this does not always lead to empathy with other political, cultural, social, and religious values. Terrorism threats and armed conflicts are also essential features of the global world. This book opens the dialogue for global understanding as a great opportunity for teachers, educators, scholars, and policy makers to better equip students and future citizens to deal with global issues. *Mental Maps* Janne Holmén, Norbert Götz, 2021-11-28

The concept of mental maps is used in several disciplines including geography, psychology, history, linguistics, economics, anthropology, political science, and computer game design. However, until now there has been little communication between these disciplines and methodological schools involved in mental mapping. *Mental Maps: Geographical and Historical Perspectives* addresses this situation by bringing together scholars from some of the related fields. Ute Schneider examines the development of German geographer Heinrich Schiffrers' mental maps using his books on Africa from the 1930s to the 1970s. Efrat Ben-Ze'ev and Chloé Yvroux investigate conceptions of Israel and Palestine, particularly the West Bank, held by French and Israeli students. By superimposing large numbers of sketch maps, Clarisse Didelon, Loiseau Sophie de Ruffray, and Nicolas Lambert identify soft and hard macro regions on the mental maps of geography students across the world. Janne Holmén investigates whether the Baltic and the Mediterranean Seas are seen as links or divisions between the countries that line their shores according to the mental maps of high school seniors. Similarly, Dario Musolino maps regional preferences of Italian entrepreneurs. Finally, Lars Erik Edlund offers an essayistic account of mental mapping based on memories of maps in his own family. This edited volume book uses printed maps, survey data, and hand-drawn maps as sources contributing to the study of human perception of space from the perspectives of different disciplines. The chapters in this book were originally published as a special issue of the *Journal of Cultural Geography*. The Knowledge Gap Natalie Wexler, 2019-08-06

Essential reading for teachers, education administrators, and policymakers alike. **STARRED** Library Journal. The untold story of

the root cause of America's education crisis. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension skills at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system, one that fellow reformers, journalists, and policymakers have long overlooked and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong; it also follows innovative educators who are in the process of shedding their deeply ingrained habits and describes the rewards that have come along. Students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

Evolutions of the Complex Relationship Between Education and Territories Angela Barthes, Pierre Champollion, Yves Alpe, 2018-03-15. The book weaves the story of the complex links between education and its territories. The aim here is to examine the education couple understood in the broadest sense: school, college, high school, universities, and territory, according to three main axes: the history and the characterization of the different ties maintained; And which the school and its territory always maintain; That of the categorization and characterization of the territories in which the school is situated; of the educational policies, both explicit and grassroots, connected with it and their effects on the school; That of recent pedagogical, didactic, and organizational innovations. The book is based on French specialists in territorial education issues.

Between Church and State James W. Fraser, 2016-09-15. A fully updated second edition of this essential look at the continuing tensions between religion and American public schools. Today, the ongoing controversy about the place or lack of place of religion in public schools is a burning issue in the United States. Prayer at football games, creationism in the classroom, the teaching of religion and morals, and public funding for private religious schools are just a few of the subjects over which people are skirmishing. In *Between Church and State*, historian and pastor James W. Fraser shows that these battles have been going on for as long as there have been public schools and argues there has never been any consensus about what the separation of church and state means for American society or about the proper relationship between religion and public education. Looking at the difficult question of how private issues of faith can be reconciled with the very public nature of schooling, Fraser's classic book paints a complex picture of how a multicultural society struggles to take the deep commitments of people of faith into account, including

people of many different faiths and no faith In this fully updated second edition Fraser tackles the culture wars adding fresh material on current battles over public funding for private religious schools He also addresses the development of the long simmering evolution creationism debate and explores the tensions surrounding a discussion of religion and the accommodation of an increasingly religiously diverse American student body Between Church and State includes new scholarship on the role of Roger Williams and William Penn in developing early American conceptions of religious liberty It traces the modern expansion of Catholic parochial schools and closely examines the passage of the First Amendment changes in American Indian tribal education the place of religion in Booker T Washington and W E B Du Bois s debates about African American schooling and the rapid growth of Jewish day schools among a community previously known for its deep commitment to secular public education
