The Games Machines, [GPU Pro 4](#) Wolfgang Engel, 2013-04-26 *GPU Pro 4 Advanced Rendering Techniques* presents ready to use ideas and procedures that can help solve many of your day to day graphics programming challenges. Focusing on interactive media and games, the book covers up to date methods for producing real time graphics. Section editors Wolfgang Engel, Christopher Oat, Carsten Dachsbacher, Michal Valient, Wessam Bahnassi and Sebastien St Laurent have once again assembled a high quality collection of cutting edge techniques for advanced graphics processing unit (GPU) programming. Divided into six sections, the book begins with discussions on the ability of GPUs to process and generate geometry in exciting ways. It next introduces new shading and global illumination techniques for the latest real time rendering engines and explains how image space algorithms are becoming a key way to achieve a more realistic and higher quality final image. Moving on to the difficult task of rendering shadows, the book describes the state of the art in real time shadow maps. It then covers game engine design including quality optimization and high level architecture. The final section explores approaches that go beyond the normal pixel and triangle scope of GPUs as well as techniques that take advantage of the parallelism of modern graphic processors in a variety of applications. Useful to beginners and seasoned game and graphics programmers alike, this color book offers practical tips and techniques for creating real time graphics. Example programs and source code are available for download on the book's CRC Press web page. The directory structure of the online material closely follows the book structure by using the chapter numbers as the name of the subdirectory.
