Ecosystems in Practice M. Giacomini, L. Stoicu-Tivadar, G. Balestra, 2023-11-14 Telemedicine is a term which covers all remotely provided health services. It removes the obstacle of distance and can equalize access to care by means of technology. Telemedicine assumed increased importance during the time of pandemic restrictions but despite increased interest progress has been slowed by factors such as cost, lack of privacy legislation, the reluctance of elderly patients to use ICT and a lack of qualified actors. It remains however one of the best solutions to the problems of different levels of healthcare provision and health outcomes across regions. This book presents the proceedings of STC2023, a Special Topic Conference STC organized by the European Federation for Medical Informatics EFMI and held from 25-27 October 2023 in Turin, Italy. These conferences promote research and development in a specific field of biomedical and health informatics and the theme of the 2023 STC was Telehealth Ecosystems in Practice. A total of 112 submissions were received for the conference. Of these, the number of papers selected after a thorough review process was 51 full papers (acceptance 59%) and 26 posters, all of which are included in these proceedings. Topics covered include homecare and telemonitoring, televisits, teleradiology, telerehabilitation, data integration and standards, embedded decision support systems, sensors, devices and patient-reported outcomes, healthbots and conversational agents, and AI applications to telehealth. Covering a wide range of topics and methods in telemedicine and biomedical informatics, the book will be of interest to all those involved in the planning and provision of healthcare.

Nanoweapons Louis A. Del Monte, 2017 Nanoweapons just might render humanity extinct in the near future, a notion that is frightening and shocking but potentially true. In *Nanoweapons* Louis A. Del Monte describes the most deadly generation of military weapons the world has ever encountered. With dimensions one thousandth the diameter of a single strand of human hair, this technology threatens to eradicate humanity as it incites world governments to compete in the deadliest arms race ever. In his insightful and prescient account of this risky and radical technology, Del Monte predicts that nanoweapons will dominate the battlefield of the future and will help determine the superpowers of the twenty-first century. He traces the emergence of nanotechnology, discusses the current development of nanoweapons such as the mini nuke which weighs five pounds and carries the power of one hundred tons of TNT, and offers concrete recommendations founded in historical precedent for controlling their proliferation and avoiding human annihilation. Most critically, *Nanoweapons* addresses the question: Will it be possible to develop, deploy and use nanoweapons in warfare without rendering humanity extinct?
