Life and Evolution Lorenzo Baravalle,Luciana Zaterka,2020-04-10 This book offers to the international reader a collection of original articles of some of the most skillful historians and philosophers of biology currently working in Latin American universities

During the last decades increasing attention has been paid in Latin America to the history and philosophy of biology but since many local authors prefer to write in Spanish or in Portuguese their ideas have barely crossed the boundaries of the continent This volume aims to remedy this state of things providing a good sample of this production to the English speaking readers bringing together contributions from researchers working in Brazilian Argentinean Chilean Colombian and Mexican universities The stress on the regional provenance of the authors is not intended to suggest the existence of something like a Latin American history and philosophy of biology supposedly endowed with distinctive features On the contrary the editors firmly believe that advances in this field can be achieved only by stimulating the integration in the international debate Based on this assumption the book focuses on two topics life and evolution and presents a selection of contributions addressing issues such as the history of the concept of life the philosophical reflection on life manipulation and life extension the structure and development of evolutionary theory as well as human evolution Life and Evolution Latin American Essays on the History and Philosophy of Biology will provide the international reader with a rather complete picture of the ongoing research in the history and philosophy of biology in Latin America offering a snapshot of this dynamic community It will also contribute to contextualize and develop the debate concerning life and evolution and the relation between the two phenomena

Plant Glycobiology - a sweet world of lectins, glycoproteins, glycolipids and glycans Els J. M. Van Damme, Nausicaä Lannoo,Cécile Albenne,Elisabeth Jamet,2015-02-12 Plants synthesize a wide variety of unique glycan structures which play essential roles during the life cycle of the plant Being omnipresent throughout the plant kingdom ranging from simple green algae to modern flowering plants glycans contribute to many diverse processes Glycans can function as structural components in the plant cell wall assist in

the folding of nascent proteins act as signaling molecules in plant defense responses or ER stress pathways or serve within the energy metabolism of a plant. In most cases glycans are attached to other macromolecules to form so called glycoconjugates e.g. glycoproteins, proteoglycans and glycolipids but they can also be present as free entities residing in the plant cell. Next to the broad complex set of glycans plants also evolved an elaborate collection of lectins or proteins with a lectin like domain which can recognize and bind to endogenous plants own or exogenous foreign glycans. Though still poorly understood in plants the dynamic interactions between lectins and carbohydrate structures are suggested to be involved in gene transcription, protein folding, protein transport, cell adhesion, signaling as well as defense responses. As such a complex and largely undetermined glycan interactome is established inside plant cells between cells and their surrounding matrix inside the extracellular matrix and even between organisms. Studying the biological roles of plant glycans will enable to better understand plant development and physiology in order to fully exploit plants for food feed and production of pharmaceutical proteins. In this Research Topic we want to provide a platform for articles describing the latest research perspectives and methodologies related to the fascinating world of plant glycobiology with a focus on following subjects:

- 1 Identification and characterization of plant glycans, their biosynthetic and degradation enzymes
- 2 Characterization of plant lectins and glycoproteins
- 3 Plant glycans in the plant's energy metabolism
- 4 Role of plant glycans in plant defense signaling
- 5 Use of plant lectins in pest control
- 6 Plant lectins as new tools in human medicine
- 7 Glyco engineering in plants
