### Locating your code switches

#### Single-Button Remote Control:

Slide the battery compartment cover back to access the code switches in the remote control (Figure 2).

#### 2-Button Remote Control:

The 2-button remote control has two push buttons (for button 1 and button 2), each activated by its own set of code switches. One of the buttons can be used to operate a garage door opener. The other button can operate an entry way, light product or another door opener.

Access the code switches for button 1 (smooth button) by sliding back the battery compartment cover. To access the code switches for button 2 (ribbed button), remove the battery compartment cover and the cover screw. Then depress the tab in the edge of the case (alongside the battery). The remote control case back will lift off (Figure 2).

#### 3-Button Remote Control:

The 3-button remote control has three buttons. The large button is recommended for use with a garage door opener. The other push buttons can be used to operate another garage door opener and/or light control product.

Slide back the battery compartment cover to access the code switches in the 3-button remote control (Figure 2).

### To match or change the code in the remote control

Locate the code switches in both the new and the original remote controls, either by removing the case screw and cover or by sliding the battery compartment cover back. Place remote controls side by side as shown (Figure 3) and set switches in all remote controls to matching positions (+, 0, -). Use a pen or screwdriver to slide the code switches.

**NOTE:** Code switch #1 on the three-button remote control is dominant, when used with a single-button remote control. Set code switch #1, in the single-button remote control, to match the push button selected on the three-button remote control (Figure 1).
