Action Analysis for Animators Chris Webster, 2012-10-02. Action Analysis is one of the fundamental principles of animation that underpins all types of animation: 2D, 3D, computer animation, stop motion, etc. This is a fundamental skill that all animators need to create polished, believable animation. An example of Action Analysis would be Shrek's swagger in the film *Shrek*. The animators clearly understood through action analysis the type of walk achieved by a large and heavy individual, the real one, and then applied their observations to the animated character of an ogre, the fantastic one. It is action analysis that enabled the animation team to visually translate a real life situation into an ogre's walk, achieving such fantastic results. Key animation skills are demonstrated with in-depth illustrations, photographs and live action footage filmed with high speed cameras. Detailed Case Studies, practical assignments and industry interviews ground action analysis methodology with real life examples. *Action Analysis for Animators* is an essential guide for students, amateurs and professionals.
