5. DNA for genetic testing can be collected from a small amount of blood, hair, saliva, and other body fluids. During a party scene in GATTACA, a woman submits a saliva sample from a recent kiss to screen her potential boyfriend/husband's DNA. Do you think that she was violating his rights by doing this without his knowledge, or is she just protecting herself from choosing an unsuitable partner?
6. How much would a DNA test reveal about someone's personality and intelligence?
7. We witnessed Vincent's parents visiting a doctor who specialized in child conception to select for the best traits for his future brother. The parents hoped that his brother would have the best possible chances for a successful life. Some of the traits mentioned in GATTACA included any possibility of inherited diseases, height, and perhaps intelligence. If you and your partner decide to have a child one day and are given the opportunity to select for special traits, would you do so? Why or why not?
8. What extreme measures is Vincent willing to undertake to achieve his dreams?
9. Discuss the real Jerome "Eugene" Morrow. How is his relationship with Vincent symbiotic? In what ways is perfection both a burden and a curse?
10. A *cautionary tale* attempts to warn the viewer about the flaws of an individual or society. What warning is the film attempting to raise? How does the film do this?

Discovery Ricki Lewis, 2009-05-11 The goal of Discovery Science as a Window to the World is to relay the excitement of

science by exploring selected topics in biology and medicine in a way that reveals the process of discovery. Each chapter will focus on the curiosity and creativity that drives scientists to wonder, observe, question, and experiment. One impetus for this project is the recognition of a growing demand among instructors for a book that departs from fact-stuffed textbooks and instead engages students in the discovery process at a personal level. Emphasizes the process of discovery through interviews and key experiments. Written by a best-selling author. Provides an in-depth conversational look at the science behind several hot topics in biology. Each chapter traces the beginnings of the field with stories of how serendipity and scientific inquiry intertwine. Presents the background to a field by including the scientific literature so the reader does not have to do a literature search or plow through a review article. Many essays introduce the work of overlooked scientists or unsung heroes: Alexey Olovnikov, telomeres, Leroy Steven, stem cells, to name a few. Also, well-known scientists are interviewed: Stanley Miller, Carl Woese, John Gearhart, and others. The essays show how ideas interact and coalesce from different lines of research. Highlights the role of the media in interpreting science for the public.

The Failure of Evangelical Mental Health Care John Weaver, 2014-11-26. In the evangelical community, a variety of alternative mental health treatments—deliverance, exorcism, biblical counseling, reparative therapy, and many others—have been proposed for the treatment of mentally ill, female, and LGBT evangelicals. This book traces the history of these methods, focusing on the major proponents of each therapeutic system while also examining mainstream evangelical psychology. The author concludes that in the majority of cases, mental disorders are blamed on two main issues: sin and demonic possession, oppression, and that as a result, some communities have become a mental health underclass who are ill-served or oppressed by both alternative and mainstream evangelical therapeutic systems. He argues that the only recourse left for mentally ill, female, and LGBT evangelicals is to rally for reform and increased accountability for both professional and alternative evangelical practitioners.

Science John Michels (Journalist), 2009. **Nature** Noel Castree, 2005-11-17. Exploring the shifting ways in which geographers have studied nature, this book emphasizes the relationships and differences between human geography, physical geography, and resource and hazards geography. The first to consider the topic of nature in modern geography as a whole, this distinctive text looks at all its major meanings, from the human body and psyche through to the non-human world, and develops the argument that student readers should abandon the idea of knowing what nature is in favour of a close scrutiny of what agendas lie behind competing conceptions of it. It deals with, amongst others, the following areas: the idea of nature, the nature of geography, de-naturalization and re-naturalization after nature. As everything from global warming to GM foods becomes headline news, the use and abuse of nature is on the agenda as never before. Synthesizing a wealth of diverse and complex information, this text makes the significant theories, debates, and information on nature accessible to students of geography, environmental studies, sociology, and cultural studies.
