Grosser,Giovacchino Genesio,2012-02-27 Anchorage by fasteners and composite structures of steel and concrete have seen
dramatic progress in research technology and application over the past decades The understanding of the fundamental
principles underlying both disciplines has significantly improved Concurrently there has been rapid growth in the
development of sophisticated new products and the establishment of international directives and codes to ensure their safe
and economical use in a wide range of engineered structures Although they deal with very similar problems the two
disciplines have developed independently from each other To optimize the use of composite structures and fastenings to
concrete however it is necessary to have knowledge of both the local behavior of the fastening system and the global
behavior of the structure It became apparent that a forum offering the opportunity to expand and to exchange experience in
the field of connecting steel and concrete would benefit all involved Furthermore this forum would aid in the rapid
dissemination of new ideas technologies and solutions as well as explore new areas of research This book forms the
