IT Service Management Best Practices Using IBM SmartCloud Control Desk Axel Buecker, Bo Batty, Jason Brown, Alex Chung, Samuel Hokama, Aurelien Jarry, Leonardo Matos, Daniel Wiegand, IBM Redbooks, 2013-12-12 SmartCloud Control Desk is a comprehensive IT Asset and Service Management solution that helps reduce cost and minimize service disruptions. It does so through automated service request handling, efficient change management, and optimized asset lifecycle management across IT and enterprise domains. SmartCloud Control Desk helps to reduce total cost of ownership by using one unified solution to license, install, and manage multiple ITIL processes under one price point. It can also help reduce business risk by using advanced impact analysis and defining automated change procedures that ensure integrity of existing infrastructure while supporting business agility. SmartCloud Control Desk improves efficiency and quality of service by unifying asset change and problem management. It lowers cost and mitigates license compliance risk by performing end-to-end software asset management. It also delivers an adaptive, role-based, simplified UI that can be more intuitive for novice users, which reduces training costs while allowing access from anywhere at anytime through mobile device support that includes BlackBerry, iOS, and Android. In addition, SmartCloud Control Desk supports both a profit center business model for internal IT organizations and an external Service Provider model. It allows organizations to manage customers and customer agreements and bills for managed assets usage and work activities while improving utilization rates and reducing unnecessary purchases by managing the IT asset lifecycle. You can deploy SmartCloud Control Desk in a variety of ways: traditional on-premise, SaaS, or VM image. This approach can make it more affordable to meet your current business needs and seamlessly move between delivery models while keeping the same functionality. This IBM Redbooks publication covers IBM SmartCloud Control Desk product configuration, customization, and implementation best practices. **HWM**, 2007-12 Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews. *Electronics Buying Guide*, 2008. *HPC@Green IT* Ralf Gruber, Vincent Keller, 2010-03-15 Making the most efficient use of computer systems has rapidly become a leading topic of interest for the computer industry and its customers alike. However, the focus of these discussions is often on single, isolated, and specific architectural and technological improvements for power reduction and conservation while ignoring the fact that power efficiency as a ratio of performance to power consumption is equally influenced by performance improvements and architectural power reduction. Furthermore, efficiency can be influenced on all levels of today's system hierarchies, from single cores all the way to distributed Grid environments. To improve execution and power efficiency requires progress in such diverse fields as program optimization, optimization of program scheduling, and power reduction of idling system components for all levels of the system hierarchy. Improving computer system efficiency requires improving system performance and reducing system power consumption. To research and reach reasonable conclusions about system performance, we need to not only understand the architectures of our computer systems and the available array of

code transformations for performance optimizations but we also need to be able to express this understanding in performance models good enough to guide decisions about code optimizations for specific systems This understanding is necessary on all levels of the system hierarchy from single cores to nodes to full high performance computing HPC systems and eventually to Grid environments with multiple systems and resources
