Stereotaxic Atlas of the Pig Brain B. Félix, D. Albe-Fessard, M.-E. Léger, 1999-10-18 This is an excellently reproduced stereotaxic atlas of the pig brain It consists of 60 frontal and 18 sagittal drawings illustrating Nissl stained sections A stereotaxic apparatus adapted for the Pig was used to determine the brain coordinates Radiographic techniques were applied to verify the correct position of the central nervous system structures in the apparatus The atlas gives frontal and sagittal serial sections of 100µm performed in two different animals Magnified diagrams of brain sections representing the cellular architecture of the brain structures were produced some of which are illustrated with photomicrographs Each plate is accompanied by a list of abbreviations used to label structures on the plate together with the terms which they represent This work will be a very useful anatomical guide for research on the pig brain      Receptor Purification Gerald Litwack, 2012-12-06 The purpose of these volumes is to provide a reference work for the methods of purifying many of the receptors we know about This becomes increasingly important as full length receptors are overexpressed in bacteria or in insect cell systems A major problem for abundantly expressed proteins will be their purification In addition to purification protocols many other details can be found concerning an individual receptor that may not be available in standard texts or monographs No book of this type is available as a compendium of purification procedures Receptor Purification provides

protocols for the purification of a wide variety of receptors. These include receptors that bind neurotransmitters, polypeptide hormones, steroid hormones, and ligands for related members of the steroid supergene family and others including receptors involved in bacterial motion. The text of this information is substantial so as to require its publication in two volumes. Consequently a division was made by grouping receptors by the nature of their ligands. Thus in Volume One there are contributions on serotonin receptors, adrenergic receptors, the purification of GTP binding proteins, opioid receptors, neurotensin receptor, luteinizing hormone receptor, human chorionic gonadotropin receptor, follicle stimulating hormone receptor, thyrotropin receptor, prolactin receptor, epidermal growth factor receptor, platelet derived growth factor receptor, colony stimulating factor receptor, insulin like growth factor receptors, insulin receptor, fibronectin receptor, interferon receptor, and the cholecystikinin receptor.

**Quantification of Brain Function Using PET**, 1996-07-17

Functional imaging of the brain is one of the most rapidly advancing areas of neuroscience and Positron Emission Tomography (PET) plays a major role in this progress. This book provides a comprehensive overview of the current status of PET and state of the art neuroimaging. It is comprised of summaries of the presentations by experts in the field. Topics covered include radiotracer selection, advances in instrumentation, image reconstruction and data analysis, and statistical mapping of brain activity. This book focuses on the accuracy of the functional image and the strategies for addressing clinical, scientific, and diagnostic questions. Covers the PET imaging process from tracer selection to analysis and interpretation. Contains 79 concise reports with abundant illustrations. The definitive state of the art book for functional neuroscience with PET.

The Serotonin Receptors Elaine Sanders-Bush, 2012-12-06

Serotonin (5-HT) was isolated and chemically characterized nearly four decades ago and is now generally accepted to function as a neurotransmitter and neuromodulatory agent. Early research focused on the measurement of concentrations, synthesis, and metabolism of 5-HT and only recently has the focus shifted to characterization of 5-HT receptors. Gaddum and Picarelli first suggested in 1957 that the effect of 5-HT in the guinea pig ileum is mediated by two pharmacologically distinguishable receptors; however, the possibility of dual 5-HT receptors was not explored systematically or successfully until the past decade. It is now clear that more perhaps many more subclasses of 5-HT receptors exist. The purpose of this book is to provide an up to date report on 5-HT receptors. This is a difficult task considering the astonishing speed at which research in this field is expanding. As the first of what we can expect to be a steady stream of monographs focusing on 5-HT receptors, the book confirms that we are in an exciting time in the history of 5-HT. For those of us who have been working on 5-HT for many years, our dream of equal progress and recognition with the more extensively studied catecholamines is finally being realized. We now have a Serotonin Club that held its first international scientific meeting in 1987 and several more international meetings are in the planning.
