TO INVESTIGATE THE PROCESS OF MEIOSIS

Organisms produced by sexual reproduction are truly new organisms. They have different sets of genes from their parents. The gametes formed by meiosis are just for the purpose of sexual reproduction. Gametes cannot grow into another organism until they fuse with another gamete to form a zygote. When the zygote forms, it is genetically unique.

Genetic variation allows a species to have a better chance of adapting to and surviving sudden changes in the environment. No two individuals in a sexually reproducing population are exactly the same. Meiosis during sexual reproduction therefore ensures maximum genetic variation and improved the chances of a species' survival.

The Philosophy of Psychiatry and Biologism Markus Rüther, Bettina Schoene-Seifert, Marco Stier, Sebastian Muders, 2014-12-03. There has been an ongoing debate about the capabilities and limits of the bio natural sciences as sources and the methodological measure in the philosophy of psychiatry for quite some time now. Still many problems remain unsolved at least partly for the following reasons. The opposing parties do not tend to speak with each other, exchange their arguments, and try to increase mutual understanding. Rather, one gets the impression that they often remain in their trenches, busy with confirming each other's opinions and developing their positions in isolation. This leads to several shortcomings: 1. Good arguments and insights from both sides of the debate get less attention than they deserve. 2. The further improvement of each position becomes harder without criticism genuinely motivated by the opposing standpoint. 3. The debate is not going to stop at least not in the way it would finish after a suggested solution finds broad support. 4. Related to this, insisting on the ultimate aptness of one side is just plainly wrong in almost every case. Since undeniably most philosophical positions usually have a grain of truth hidden in them, in sum many controversies persist with regard to the appropriate methodological, epistemological, and even ontological level for psychiatric explanation and therapies. In a conference which took place in December last year, we tried to contribute to a better understanding about what really is at issue in the philosophy of psychiatry. We asked for a common basis for several sides, for points of divergence, and for the practical impact of different solutions on everyday work in psychiatry. Since psychiatry as a whole is a subject that is too wide to be covered in a single meeting, we focused on the following four core topics: 1. Competing accounts of psychiatric biologism, reductionism, and physicalism. 2. Mental disease and brain disease in the light of current neuroscientific and epigenetic findings. 3. Normative suppositions for different accounts of mental disease. 4. Normative implications of different accounts of mental disease. These topics, which have been vigorously as well as fruitfully discussed at our conference, will ideally be too in the center of our contribution to *Frontiers*. More precisely, we think of arranging a research topic which assembles the issues of the conference. At this point, it seems promising to us to group three or four Target Articles (TA) and let them get criticized by a couple of commentaries from different angles to give the issue a much broader and detailed perspective.

Patient Zero Lydia Kang, Nate Pedersen, 2021-11-16. How did it start? Why did it spread? How do we stop it?
