## Life Sciences Exemplars For 2014:

**Global Transformations in the Life Sciences, 1945-1980** Patrick Manning, Mat Savelli, 2018-06-07 The second half of the twentieth century brought extraordinary transformations in knowledge and practice of the life sciences. In an era of decolonization, mass social welfare policies, and the formation of new international institutions such as UNESCO and the WHO, monumental advances were made in both theoretical and practical applications of the life sciences, including the discovery of life's molecular processes and substantive improvements in global public health and medicine. Combining perspectives from the history of science and world history, this volume examines the impact of major world historical processes of the postwar period on the evolution of the life sciences. Contributors consider the long-term evolution of scientific practice, research, and innovation across a range of fields and subfields in the life sciences and in the context of Cold War anxieties and ambitions. Together, they examine how the formation of international organizations and global research programs allowed for transnational exchange and cooperation but in a period rife with competition and nationalist interests, which influenced dramatic changes in the field as the postcolonial world order unfolded. **Innovation, Regional**

**Development and the Life Sciences** Kean Birch, 2016-10-14 The life sciences is an industrial sector that covers the development of biological products and the use of biological processes in the production of goods, services, and energy. This sector is frequently presented as a major opportunity for policy makers to upgrade and renew regional economies, leading to social and economic development through support for high-tech innovation. *Innovation, Regional Development and the Life Sciences* analyses where innovation happens in the life sciences, why it happens in those places, and what this means for regional development policies and strategies. Focusing on the UK and Europe, its arguments are relevant to a variety of countries and regions pursuing high-tech innovation and development policies. The book's theoretical approach incorporates diverse geographies, e.g., global, national, and regional, and political, economic forces, e.g., discourses, governance, and finance, in order to understand where innovation happens in the life sciences, where and how value circulates in the life sciences, and who captures the value produced in life sciences innovation. This book will be of interest to researchers, students, and policy makers dealing with regional, local economic development. *Innovative Research in Life Sciences* E. Andrew

Balas, 2018-11-08 I thoroughly enjoyed reading this book as it has taken me on a journey through time across the globe and through multiple disciplines. Indeed, we need to be thinking about these concepts and applying them every day to do our jobs better. Farah Magrabi, Macquarie University, Australia. The reader will find intriguing not only the title but also the content of the book. I'm also pleased that public health and even more specifically, epidemiology, has an important place in this ambitious discussion. Elena Andresen, Oregon Health Science University, USA. This book is very well written and addresses an important topic. It presents many reasons why basic scientists/researchers should establish collaborations and access information outside traditional means and not limit thinking but rather expand such and perhaps develop more innovative and

[Data and Text Processing for Health and Life Sciences](#) Francisco M. Couto,2019-06-10 This open access book is a step by step introduction on how shell scripting can help solve many of the data processing tasks that Health and Life specialists face everyday with minimal software dependencies The examples presented in the book show how simple command line tools can be used and combined

to retrieve data and text from web resources to filter and mine literature and to explore the semantics encoded in biomedical ontologies To store data this book relies on open standard text file formats such as TSV CSV XML and OWL that can be open by any text editor or spreadsheet application The first two chapters Introduction and Resources provide a brief introduction to the shell scripting and describe popular data resources in Health and Life Sciences The third chapter Data Retrieval starts by introducing a common data processing task that involves multiple data resources Then this chapter explains how to automate each step of that task by introducing the required commands line tools one by one The fourth chapter Text Processing shows how to filter and analyze text by using simple string matching techniques and regular expressions The last chapter Semantic Processing shows how XPath queries and shell scripting is able to process complex data such as the graphs used to specify ontologies Besides being almost immutable for more than four decades and being available in most of our personal computers shell scripting is relatively easy to learn by Health and Life specialists as a sequence of independent commands Comprehending them is like conducting a new laboratory protocol by testing and understanding its procedural steps and variables and combining their intermediate results Thus this book is particularly relevant to Health and Life specialists or students that want to easily learn how to process data and text and which in return may facilitate and inspire them to acquire deeper bioinformatics skills in the future

*Fluorescence Microscopy in Life Sciences* Juan Carlos Stockert ,Alfonso Blazquez-Castro,2017-12-15 Fluorescence Microscopy is a precise and widely employed technique in many research and clinical areas nowadays Fluorescence Microscopy In Life Sciences introduces readers to both the fundamentals and the applications of fluorescence microscopy in the biomedical field as well as biological research Readers will learn about physical and chemical mechanisms giving rise to the phenomenon of luminescence and fluorescence in a comprehensive way Also the different processes that modulate fluorescence efficiency and fluorescence features are explored and explained

**Technologies in Biomedical and Life Sciences Education** Harry J. Witchel,Michael W. Lee,2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content including media as a learning supplement in comparison to traditional face to face learning Each chapter includes research on and a broad brush summary of approaches to combining life sciences education with educational technologies The chapters are organized into four main sections each of which focuses on a key question regarding the consequences of incorporating media into education In this regard the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity Further they address the ongoing discussion as to whether students need to be present for lectures and on how having agency in their own learning can improve both retention and conceptual understanding To link the content to current events the authors also shed light on the impact that the COVID 19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies Consequently the book offers life science educators valuable guidance on the technologies already available and an outlook on what is yet to come

**The elephant and the**

**dragon in contemporary life sciences** Joy Y. Zhang, Saheli Datta Burton, 2022-03-15 This book provides a powerful diagnosis of why the global governance of science struggles in the face of emerging powers Through unpacking critical events in China and India over the past twenty years it demonstrates that the subversiveness assumed in the two countries rise in the life sciences reflects many of the regulatory challenges that are shared worldwide It points to a decolonial imperative for science governance to be responsive and effective in a cosmopolitan world By highlighting epistemic injustice within contemporary science the book extends theories of decolonisation

**Regional Innovation Strategies 3 (RIS3)** Roberta Capello, Henning Kroll, 2018-12-07 With regions and nations having formally fulfilled the ex ante conditionality this book provides a first overall review of RIS3 policy processes aiming to assess the consistency of the concept of smart specialization from an applied policy oriented perspective Moving from the theory of design to the practice of implementation the reflections and case studies in this volume reveal strengths and weaknesses in the way concrete strategies have been conceived and implemented enabling reflections on the future of the concept in a more general sense In many cases smart specialization strategies turn out to be new variants of regional development policies embracing the importance of a place based approach However the approach s potential to add distinctive value will stem from its capacity to turn innovation and knowledge into tools for local development by harnessing them for wider territorial development goals By helping regions to identify and leverage untapped resources through new processes smart specialization based policies may help to reconcile cohesion and competitiveness objective Consequently new approaches appear most promising where institutional administrative and political conditions allow the setup of genuinely new processes and where their focus is on territorial assets in a comprehensive manner rather than mere industrial renewal This book was originally published as a special issue of European Planning Studies
