Manipulation of the Spine, Thorax and Pelvis E-Book Peter Gibbons, Philip Tehan, 2016-07-28 The new edition of this popular book continues to present the latest scientific evidence for the successful use of the high velocity low amplitude HVLA thrust technique. Prepared in a readily accessible, amply illustrated format, this book is designed to equip practitioners with a detailed understanding of the underlying basis of the HVLA thrust technique and the best means to safely employ it in the effective management of a range of disorders of the spine and pelvic regions. The book is arranged in three sections to maximise understanding of what can be challenging areas to comprehend and effectively manage. Section One explores the biomechanics of movement and forces between adjacent vertebrae followed by a discussion of positioning and locking. These chapters are then followed by a discussion about safety with particular reference to the management of the cervical spine. A chapter on evidence and what represents good medical evidence concludes Section Two. Section Three presents using an ample array of clear photographs and useful summary boxes over 40 HVLA techniques ranging from the atlanto occipital joint C0/C1 to the coccyx. Section Three concludes with treatment failures often technique derived and analysis. Prepared by authors of international renown and now with an associated website containing over 45 minutes of useful film footage, this book will be ideal for all manual therapy practitioners dealing with the management of the spine and pelvic areas. Presents the scientific basis of the HVLA thrust, one of the oldest and most commonly used manipulative techniques available. Provides an accessible synthesis of the latest evidence for the effective use of the HVLA thrust. Clearly explains coupled motion and describes the latest scientific research in this area. Presents over 250 photographs and 60 minutes of film on an associated website. Contains a detailed discussion regarding patient safety. Presents a comprehensive discussion surrounding treatment failures. Well illustrated and clearly written for easy understanding. Advises readers with regards to safe patient selection, particularly important for the management of the cervical spine. Suitable for both the novice and expert readerships. 2 colour throughout with over 30 new images. Clinical history presentation and examination for patients presenting with cervical artery dissection. Addresses the important issues surrounding patient consent. Additional research and guidelines that support the use of HVLA thrust techniques. Use of spinal manipulation in the treatment of radiculopathy, pregnant women and children.

Spinal Manipulation Made Simple Jeffrey Maitland, 2012-10-30 Written by an expert on alternative bodywork, this book presents techniques for manipulating the soft tissues of the back in a safe, simple manner. The method avoids the high velocity low amplitude thrusting techniques employed by chiropractors. Instead, it utilizes the intuitive sense of somatic bodyworkers combined with the proven theory and technique of Rolfing to provide safe and effective treatment. Maitland shows how to elegantly release joint fixations in the spine, sacrum, pelvis and ribcage by using subtle soft tissue techniques rather than the

thrusting techniques that pop the joints This gentler kind of individualized Rolfing work is thoroughly described within an explanation of biomechanics aided by drawings and photographs which depict techniques and anatomy Advanced Osteopathic and Chiropractic Techniques for Manual Therapists Giles Gyer,Jimmy Michael,2020-04-21 Develop your knowledge of chiropractic and osteopathy with this comprehensive guide to advanced skills and peripheral manipulation techniques This practical handbook takes into account the latest research highlighting the neurophysiological effects of these techniques and providing clear step by step guidance from experienced manual therapists Covering key topics such as the effects of manipulation on organs working in sports settings and motion palpation misconceptions the book demonstrates how to work with a range of joints with advice on diagnostics contraindications and safety precautions This is an expert collaboration between professions and can be used as the go to clinical handbook for all manual therapists Spine and Joint Articulation for Manual Therapists Giles Gyer,Jimmy Michael,Ben Calvert-Painter,2016-09-01 The book focuses on the practical application of articulation and mobilisation techniques with clear explanations and visual support of the techniques Techniques are described for all body regions Most other books for therapists include only one chapter on these important techniques This book covers a variety of best practise techniques for all areas of the body Examples are given to show how to adapt the techniques with the patient in different positions It also addresses the use of these techniques on children the elderly and pregnant women The mechanisms of each technique are explained with reference to the related anatomy and physiology Information is also given to help the therapist use the techniques safely for both themselves and their patients by adapting their own stance and posture to get maximum effect with minimum effort *Manual Therapy of the Spine* Mark Dutton,2002 This book describes the anatomy and biomechanics of each area of the spine pelvis and TMJ and the theories behind the subjective and objective exams Working from this foundation detailed explanations on the assessment and treatment of each of the various areas are given enabling the student and clinician to differentially diagnose and integrate the results gleaned from the assessment in order to formulate a working hypothesis The sequential flow of the assessment is also detailed with explanations as to its rationale allowing a clinician of any proficiency level to use this book as a resource for an accurate biomechanical assessment and the design of a specific treatment plan based on those assessment findings Recognizing the varying abilities between clinicians most techniques are described with the patient sitting or lying in different positions
