The Epiphone Story

Late in the 19th century, a Greek luthier and violin maker named Anastasio Stathopoulos moved his family to New York in search of a better life. He found it - and built a company that became one of the greatest names in instruments.

The "House of Stathopoulos" was opened in 1873 and Anastasio brought his 17 year old son, Epimenides (also known as "Epi"), into the company in 1890. "Epi" and his father soon named some of their new instruments Epiphone and the legend began.

After 47 years of Epiphone production, Gibson USA acquired the rights to the Epiphone name in 1957 and began to build Epiphones in 1959. Under the guidance of Gibson USA, Epiphone continued to set new standards for quality, value and innovation.

Today headquartered in Nashville, Tennessee, Epiphone continues to design and set rigid quality and performance standards for each and every Epiphone instrument.

Every Epiphone employee is committed to producing the finest musical instruments available and ultimate customer satisfaction. The Epiphone mark is a symbol of that commitment and your assurance that this Epiphone will give you years of trouble-free enjoyment.

Care and Maintenance

We recommend that you always keep your instrument in a case when transporting or storing it. This reduces the possibility of damage due to ticks, pins, and sudden changes in climate or atmosphere.

Carry the case with the lid towards your body. In the event that you have not properly fastened the latches and the case opens, the lid will fall against your leg and prevent the instrument from falling on the ground. Never leave your instrument in the trunk of your car or store it in a place of extreme temperature and humidity. Never place anything on top of your guitar while in the case.

Humidity or water can damage the finish of your instrument so always wipe down your guitar after playing or before storing with a clean soft cloth. Polishing & wax come with your guitar which is a good quality ceramic wax which will protect the durability of the finish.

When using a shoulder strap for standing playing position, check that all contact points and strap fasteners are secure.

Avoid sharp blows to any part of your instrument. Be particularly alert to possible blows to the back of the headstock, machine heads (tuners), and the neck heel area. Many headstock breaks are the result of the guitar being knocked over while being temporarily stored on a guitar stand, or while still in the case. Do not stand the guitar over on its end.

Should major adjustments become necessary, consult your local authorized Gibson/Epiphone dealer or service center.

Restringing Your Instrument

Fresh strings are a vital part of that "new instrument" sound. When strings begin to go dead, a guitar loses its edge, and as the strings undergo further wear and tear they go "dead." Your Epiphone will sound its best with new strings. How much you play and individual body chemistry determine how often to change strings. For some players, even light perspiration shortens string life. The sound of the strings is the only sure way to judge whether or not they need to be changed. And if one string needs to be changed, the others can't be far behind. To maintain tone between changes, change the whole set.

Proper string installation is critical to the playability of your instrument. An incorrectly installed string can slip and cause the instrument to go out of tune. When changing strings, it is recommended changing one string at a time in order to maintain tension on the neck and bridge. The pressure of the strings holds the bridge and saddles in place, and removing all the strings could misalign a new setup.

Bridge Stringing - Forward/Backward

1. At the Bridge

The bridge end of the instrument is shown as shown in the image at left and right. Different recommendations are shown according to the bridge and string type. The bridge end is shown string before the string posts at the headstock.

Bridge Stringing - Forward/Backward (Point about how the headstock)

Four Post Stringing

2. At the Headstock

Bring the string from the bridge to the post on the corresponding tuner located on the headstock. Put string (B) through the hole or slot in the post at (B) to (C), around the upper side of the post (C), and under the string (A) at (B), back again around the string post (C). Now when you wind the string, it will lock into against the post as shown in the image at left called "Four Post Stringing."

Tuning Your Instrument

Many individuals have their own method of tuning their instrument. We recommend the following method. An Epiphone guitar is tuned to A-440, utilizing a tuning fork, electronic tuner or pitch pipe.

The following chart shows how different instruments are tuned. The first string, for the purpose, is considered to be the smallest diameter. Tune the two outside strings first, then tune towards the center. This equalizes the pressure on the bridge and allows rapid tuning. Check intonation.
