Bickers, 2025-12-19 Classical Optics and Electromagnetic Waves offers an exploration of optics the physics subfield examining light's properties and applications Beginning with the mathematical foundations of electromagnetic waves in matter the text develops geometric optics as the short wavelength limit of Maxwell's Equations establishing a framework for understanding wavefronts light rays and intensity variations The work progresses methodically through image formation using mirrors and lenses in the paraxial approximation employing transfer matrices for precise calculations It thoroughly examines wave propagation through the Huygens Fresnel and Fresnel Kirchhoff integrals comparing scalar and vector field approaches while demonstrating their reduction to geometric optics Diffraction receives comprehensive treatment across various scenarios infinite slits circular apertures barriers and gratings The text introduces coherence concepts before exploring interference phenomena developing the amplitude autocorrelation function and its connection to power spectra through the Wiener Khinchin Theorem Advanced topics include detailed analysis of Michelson and Fabry Perot interferometers thin film stack calculations using the Abeles transfer matrix technique Gaussian beam wave functions optical cavity properties and Fourier optics End of chapter guided problems numerous appendices and a glossary of symbols make this an invaluable textbook for intermediate to advanced students of classical optics Designed as a natural follow on to Purcell and Morin's Electricity and Magnetism in a three semester honours sequence this text bridges introductory electromagnetism and specialized optics coursework It also serves as a more mathematically rigorous alternative to Hecht's Optics for upper division students who have completed one or more intermediate level electromagnetism courses Colour figures referred to in the book can be accessed at <https://www.routledge.com/Classical-Optics-and-Electromagnetic-Waves/Bickers/p/book/9781032766171> Key Features Designed as a follow on resource for students who have previously taken courses in electromagnetism Presents derivations and comments on approximations as they are introduced Includes extensive end of chapter guided problems to aid learning
