book *Mathematics Through Problems From Olympiads and Math Circles to Profession* Part I Algebra was recently published  
in the same series Part III Combinatorics will be published soon The main goal of this book is to develop important parts of  
mathematics through problems The authors tried to put together sequences of problems that allow high school students and  
some undergraduates with strong interest in mathematics to discover and recreate much of elementary mathematics and  
start edging into more sophisticated topics such as projective and affine geometry solid geometry and so on thus building a  
bridge between standard high school exercises and more intricate notions in geometry Definitions and or references for  
material that is not standard in the school curriculum are included To help students that might be unfamiliar with new  
material problems are carefully arranged to provide gradual introduction into each subject Problems are often accompanied  
by hints and or complete solutions The book is based on classes taught by the authors at different times at the Independent  
University of Moscow at a number of Moscow schools and math circles and at various summer schools It can be used by high  
school students and undergraduates their teachers and organizers of summer camps and math circles In the interest of  
fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life  
MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents
