Duke,Marsha Carr,William Sterrett,2012-12-27 Developing and updating school improvement plans is an annual ritual for virtually all school principals and their school improvement committees Still large numbers of schools continue to produce disappointing outcomes The authors believe that part of the problem is the result of plans that focus on the wrong targets and that rely on ineffective strategies for improvement To help principals and their school improvement committees develop and implement plans with a greater likelihood of success the authors offer a step by step process for school improvement planning They go on to pinpoint specific school improvement goals including raising reading and mathematics achievement building robust school cultures addressing the needs of English language learners improving instruction and reducing absenteeism and dropouts For each goal a variety of objectives and proven strategies is presented along with sample school improvement plans The book addresses the differences in planning to turn around a low performing school planning to sustain improvements over time and planning to move a good school to a great school *Neutron Beam Design, Development, and Performance for Neutron Capture Therapy* Otto K. Harling,John a. Bernard,Robert C. Zamenhof,2013-03-08 For this Workshop the organizers have attempted to invite experts from all known centers which are engaged in neutron beam development for neutron capture therapy The Workshop was designed around a series of nineteen invited papers which dealt with neutron source design and development and beam characterization and performance Emphasis was placed on epithermal beams because they offer clinical advantages and are more challenging to implement than thermal beams Fission reactor sources were the basis for the majority of the papers however three papers dealt with accelerator neutron sources An additional three invited papers provided a summary of clinical results of Ncr therapy in Japan between 1968 and 1989 and overviews of clinical considerations for neutron capture therapy and of the status of tumor targeting chemical agents for Ncr Five contributed poster papers dealing with NCT beam design and performance were also presented A rapporteurs paper was prepared after the Workshop to attempt to summarize the major aspects issues and conclusions which resulted from this Workshop Many people contributed to both the smooth functioning of the Workshop and to the preparation of these proceedings Special thanks are reserved for Ms Dorothy K Reliability and Robustness of Engineering Software II C.A. industry as applications of computer programs are now an essential part of any engineering project. In spite of this engineering software is not always reliable and many fail to produce good solutions. The extent of this problem which is very costly to the engineering industry and its consequences are somewhat hidden because the software industry has not reached the necessary maturity. An engineer needs a long training before being able to design a body for instance. However to do that he may use a computer program which has undergone no validation whatsoever and is written by someone without any engineering knowledge. It is imperative to address this problem to ensure that computer codes are properly prepared to provide good solutions and that they are robust and reliable. This 2nd International Conference on Reliability and Robustness of Engineering Software RRES 91 was called to address this problem. The meeting was held in Milan Italy in April 1991 and was of importance to engineers working in industry who are actively involved with the development of computer codes.

Engineering Hany Shehata, Mona Badr, 2020-11-19 This book intends directly the practical engineers who will be of great interest in reading the interesting chapters. Earthwork projects are critical components in civil construction and often require detailed management techniques and unique solution methods to address failures. Being earthbound earthwork is influenced by geomaterial properties at the onset of a project. Hence an understanding of the in situ soil properties and all geotechnical aspects is essential. Analytical methods for earth structures remain critical for researchers due to the mechanical complexity of the system. Striving for better earthwork project management the geotechnical engineering community continues to find improved testing techniques for determining sensitive properties of soil and rock including stress wave based non destructive testing methods. To minimize failure during earthwork construction past case studies and data may reveal useful lessons and information to improve project management and minimize economic losses.
