Semilocal Categories and Modules with Semilocal Endomorphism Rings Alberto Facchini, 2019-10-23 This book collects and coherently presents the research that has been undertaken since the author s previous book Module Theory 1998 In addition to some of the key results since 1995 it also discusses the development of much of the supporting material In the twenty years following the publication of the Camps Dicks theorem the work of Facchini Herbera Shamsuddin

Puninski Prihoda and others has established the study of serial modules and modules with semilocal endomorphism rings as one of the promising directions for module theoretic research Providing readers with insights into the directions in which the research in this field is moving as well as a better understanding of how it interacts with other research areas the book appeals to undergraduates and graduate students as well as researchers interested in algebra

***Discrete and Continuous Nonlinear Schrödinger Systems*** M. J. Ablowitz, B. Prinari, A. D. Trubatch, 2004 In recent years there have been important and far reaching developments in the study of nonlinear waves and a class of nonlinear wave equations which arise frequently in applications The wide interest in this field comes from the understanding of special waves called solitons and the associated development of a method of solution to a class of nonlinear wave equations termed the inverse scattering transform IST Before these developments very little was known about the solutions to such soliton equations The IST technique applies to both continuous and discrete nonlinear Schrödinger equations of scalar and vector type Also included is the IST for the Toda lattice and nonlinear ladder network which are well known discrete systems This book first published in 2003 presents the detailed mathematical analysis of the scattering theory soliton solutions are obtained and soliton interactions both scalar and vector are analyzed Much of the material is not available in the previously published literature

**Spaces of Kleinian Groups** Yair N. Minsky, Makoto Sakuma, Caroline Series, 2006-06-19 The subject of Kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development the last few years having seen the resolution of many longstanding conjectures This volume contains important expositions and original work by some of the main contributors on topics such as topology and geometry of 3 manifolds curve complexes classical Ahlfors Bers theory computer explorations and projective structures Researchers in these and related areas will find much of interest here

**Perturbation of the Boundary in Boundary-Value Problems of Partial Differential Equations** Dan Henry, 2005-05-26 Perturbation of the boundary is a rather neglected topic in the study of PDEs for two main reasons First on the surface it appears trivial merely a change of variables and an application of the chain rule Second carrying out such a change of variables frequently results in long and difficult calculations In this book first published in 2005 the author carefully discusses a calculus that allows the computational morass to be bypassed and he goes on to develop more general forms of standard theorems which help answer a wide range of problems involving boundary perturbations Many examples are presented to demonstrate the usefulness of the author's approach while on the other hand many tantalizing open questions remain Anyone whose research involves PDEs will find something of interest in this book

**Pattern Recognition and Artificial Intelligence** Christian Wallraven, Cheng-Lin Liu, Arun Ross, 2025-02-07 This volume constitutes the refereed proceedings of the 4th International Conference on Pattern Recognition and Artificial Intelligence ICPRAI 2024 held in Jeju Island South Korea during July 03-06 2024 The 69 full papers presented together with 08 short papers were carefully reviewed and selected from a total of 135 submissions The conference focuses on topics that includes advanced deep learning approaches for image and document

**Rational Points on Curves Over Finite Fields** Harald Niederreiter, Chaoping Xing, 2001-06-14 Ever since the seminal work of Goppa on algebraic geometry codes rational points on algebraic curves over finite fields have been an important research topic for algebraic geometers and coding theorists The focus in this application of algebraic geometry to coding theory is on algebraic curves over finite fields with many rational points relative to the genus Recently the authors discovered another important application of such curves namely to the construction of low discrepancy sequences These sequences are needed for numerical methods in areas as diverse as computational physics and mathematical finance This has given additional impetus to the theory of and the search for algebraic curves over finite fields with many rational points This book aims to sum up the theoretical work on algebraic curves over finite fields with many rational points and to discuss the applications of such curves to algebraic coding theory and the construction of low discrepancy sequences
