*The Philosophy of Set Theory* Mary Tiles, 2004-01-01 A century ago Georg Cantor demonstrated the possibility of a series of transfinite infinite numbers His methods unorthodox for the time enabled him to derive theorems

that established a mathematical reality for a hierarchy of infinities Cantor's innovation was opposed and ignored by the establishment years later the value of his work was recognized and appreciated as a landmark in mathematical thought forming the beginning of set theory and the foundation for most of contemporary mathematics As Cantor's sometime collaborator David Hilbert remarked No one will drive us from the paradise that Cantor has created This volume offers a guided tour of modern mathematics Garden of Eden beginning with perspectives on the finite universe and classes and Aristotelian logic Author Mary Tiles further examines permutations combinations and infinite cardinalities numbering the continuum Cantor's transfinite paradise axiomatic set theory logical objects and logical types and independence results and the universe of sets She concludes with views of the constructs and reality of mathematical structure Philosophers with only a basic grounding in mathematics as well as mathematicians who have taken only an introductory course in philosophy will find an abundance of intriguing topics in this text which is appropriate for undergraduate and graduate level courses
