

Geomorphology

- Geomorphology is the study of the physical processes and surface features of the Earth

What happens to the precipitation that falls within a drainage basin?

- The drainage basin is an open system, of inputs, stores, flows and output
- The drainage basin collects precipitation and allows water to seep into the ground through the process of infiltration to become underground water. water is stored in lakes in drainage basins.

Features of a drainage basin

- ✓ Catchment area
- ✓ River system
- ✓ Tributary
- ✓ Watershed
- ✓ River mouth
- ✓ Source
- ✓ Confluence
- ✓ interfluvium
- ✓ water table
- ✓ Ground water
- ✓ Surface run-off
- ✓ infiltration

(NB: Check the definitions in the glossary on the first page)

Geomorphology Summary Gr1

Yan Bai

Geomorphology Summary Gr1:

Summary of Investigations, 1963 A summary of recent scientific and economic results accompanied by a list of publications released in fiscal 1963 a list of geologic and hydrologic investigations in progress and a report on the status of topographic mapping *Geomorphic setting, aquatic habitat, and water-quality conditions of the Molalla River, Oregon, 2009-10* Kurt D. Carpenter, Christiana R. Czuba, Christopher S. Magirl, Mathieu D. Marineau, Steve Sobieszczyk, Jonathan A. Czuba, Mackenzie K. Keith, 2012-02-29 This report presents results from a 2009 10 assessment of the lower half of the Molalla River The report describes the geomorphic setting and processes governing the physical layout of the river channel and evaluates changes in river geometry over the past several decades using analyses of aerial imagery and other quantitative techniques The peak flow hydrology in the Molalla River has been characterized by a series of large floods during the 1960s and 1970s a period of relatively small peak flows from 1975 to 1995 and a relative increase in severity of events in the past 15 years Although incomplete the gaging record for the early 20th century showed only modest high flows The flood chronology since 1960 has affected the geomorphology of the river corridor principally by increasing the active channel width The area affected by channel migration in the late 20th century however was reduced by the construction of revetments along the river corridor which acted to contain channel movement The study area along the Molalla River was divided into six unique geomorphic reaches The upper most reach designated GR6 is a narrow bedrock controlled reach with ample shade and large riffles The next downstream reach GR5 is also largely bedrock controlled but has a wider flood plain and active channel migration zone The longest geomorphic reach GR4 has a wide channel migration zone with many strategically placed revetments that work in concert with bounding bedrock to the northeast to suppress overall channel movement In contrast GR3 is a wide active reach that responds more dramatically to flood and non flood periods than the other geomorphic reaches The anthropogenically confined GR2 adjacent the City of Canby has relatively little historical channel movement and relatively few gravel bars Finally the farthest downstream reach GR1 is an actively meandering reach that most closely resembles its pre development state Detailed analysis of aerial imagery from 1994 2000 2005 and 2009 showed that channel migration activity and active channel widths were greater in GR3 than in any other geomorphic reach and were related directly to the timing and magnitude of high flows Similarly the revegetation of exposed bars is significant in GR3 and elsewhere when large floods do not occur A qualitative analysis of older aerial imagery dating back to 1936 showed that the recent channel migration activity in GR3 is no greater than it was historically Channel migration activity in GR2 GR4 and GR5 was reduced relative to historical rates as a consequence of the construction of revetments and encroachment along the river corridor Analyses of the longitudinal water surface profile first suggested a possible accumulation of alluvium in GR3 but subsequent analysis of the shape of the longitudinal profile juxtaposed against bedrock outcrops in the river channel showed that the river is largely flowing over a shelf of bedrock and not filling with sediment

Water quality benthic algae and benthic invertebrate conditions were examined during summer low flow periods to determine the overall health of the river and to provide possible insights into the physical or chemical influences on diatom assemblages. A wetter than normal spring in 2010 resulted in higher than normal flows in July and August that may have delayed the algal growing season and limited the accrual of algal biomass in the river. Longitudinal changes in water quality including downstream increases in water temperature and specific conductance were observed in the Molalla River during August and September. Such patterns are typical of many rivers receiving inputs from anthropogenic sources in the flood plain including agricultural and rural residential lands. Milk and Gribble Creek basins as well as some urban runoff in the lower river. Nutrient concentrations in the Molalla River were generally low at most sampling sites but did increase at the Goods Bridge and Knights Bridge sites presumably from a greater influence from anthropogenic sources that enter the river from tributaries, agricultural irrigation returns or groundwater in the lower basin. Nitrate concentrations at Glen Avon and Knights Bridges exceeded their respective reference values for streams in the Cascade Range and Willamette Valley. Although the nitrate nitrogen concentrations were somewhat elevated, phosphorus in contrast is relatively much less abundant in the Molalla River. N:P ratios for soluble biologically available nitrogen and phosphorus were lower in the upper middle reaches, less than 5, but the absolute concentrations of orthophosphorus, 0.010 milligrams per liter or less in July, suggest that attached periphytic algae in the river may be limited by phosphorus concentrations or some other factor but probably not by nitrogen. The Molalla River has lower phosphorus concentrations than other rivers draining the Cascade Range because the phosphate rich rocks of the Oregon High Cascades prevalent in other drainages are not present in the Molalla River basin which is wholly contained within the Western Cascade Range geologic province. The 2010 algal growing season was delayed due to an unusually cold and wet spring which produced streamflows 12-18 percent higher than normal in July and August and could have limited the accrual of periphyton biomass in the river. Nevertheless, a healthy biofilm of diatoms and other types of algae developed in the shallow riffle habitats during July, covering the entire stream channel in some areas. Generally, riffle habitats appeared healthy with little sediment and low substrate embeddedness; that is, the degree of infilling of fine sediments around gravels and cobbles was less than 5 percent at all sites except the Knights Bridge site where embeddedness was about 10 to 25 percent higher. Algal biomass levels in July were moderate, ranging from 30 to 55 mg of chlorophyll a per square meter, and the high densities of benthic macroinvertebrate grazers in the riffles suggests that the accumulation of algae biomass levels may have been limited by these herbivores. In August, however, a benthic bloom of filamentous green algae, *Cladophora glomerata*, increased algal biomass in the lower river with nuisance levels at the Knights Bridge site. Higher nutrient concentrations, both nitrate and orthophosphate, combined with fewer invertebrate grazers, mostly snails, likely contributed to the higher biomass at this site. Long filaments of *Cladophora* also were observed in the area near the Canby drinking water treatment plant where in previous years algae have clogged water intakes during periods of

senescence when algae detach from the river bed and enter the intake In 2010 algal biomass conditions were not as severe and the intakes were not affected Distinct fluctuations in concentrations of dissolved oxygen and in pH levels from algal photosynthesis were observed at all sites sampled with the largest diel changes and highest daily maximum values occurring at the two most downstream sites particularly at Knights Bridge Although some relatively high pH values were measured as much as 8.4 units none of the pH measurements exceeded State of Oregon water quality standards even in the afternoon hours on warm sunny days Dissolved oxygen concentrations at Goods Bridge and Knights Bridge did not meet the 8 milligrams per liter criteria in the early morning hours but compliance with the standards is only evaluated with 30 day average minimum values which were not available Relative to the salmon spawning criteria for which the data collected during this study applies only to the Glen Avon Bridge site in September water temperature pH and concentrations of dissolved oxygen all met the state standard in effect Thirty three species of algae were identified in the Molalla River including fast growing small diatoms and very large stalked diatoms filamentous green and blue greens and a few planktonic forms of green and blue green algae that may have washed into the river from an upstream pond The occurrence of high biomass forming types of algae in the river including filamentous greens such as *Cladophora* and large stalked diatoms such as *Cymbella* and *Gomphonema* could be a concern for fish populations because of the potential for smothering fish redds or by impacting benthic invertebrate populations that feed fish Together most of these algae and overall algal biomass are typical of generally high quality waters with little organic pollution high concentrations of dissolved oxygen and alkaline pH The relatively high percentage of eutrophic taxa does however suggest some degree of nutrient enrichment in the river despite the relatively low concentrations observed at most sites Uptake of dissolved nutrients by algae and inputs of additional nutrients complicates interpretations regarding nutrient concentrations in the river especially because samples were collected during summer growing season Although the bulk of the diatom species generally were similar among at least the four upstream sampling sites the multivariate ordination suggests a downstream trend in assemblage structure from the Glen Avon Bridge site to the Highway 213 Bridge The next downstream site at Goods Bridge near the downstream end of the alluvial GR3 reach however plotted closer to the most upstream site at Glen Avon Bridge which indicates a change in assemblage structure The algal indicator species analysis showed a change in species composition at the Goods Bridge site including decreases in eutrophic diatoms increases in the relative abundance of oligotrophic diatoms and an increase in diatoms sensitive to organic pollution that suggests an improvement in water quality conditions Although this may be related to the enhanced water exchange into and out of the streambed in the alluvial reach and such hyporheic activity could work to clean the river of organic compounds and nutrients small decreases in water quality lower concentration of dissolved oxygen and higher conductance and nutrient concentrations were observed between the Highway 213 and Goods Bridge sites The multivariate analysis relating the diatom species composition data to the geomorphic and water quality variables indicated

that the presence of local gravel bars bedrock exposure to the sun open canopy and pH had a significant role in shaping the diatom assemblage structure Although there was a high percentage of similarity among samples many of these factors have the potential to affect diatoms and other algae through various interrelated mechanisms that relate to channel mobility and associated effects on light available for algal photosynthesis for example and other potential factors Although only qualitatively addressed for this study benthic macroinvertebrates including mayflies caddisflies and stoneflies were abundant in the Molalla River and indicate a high degree of secondary production in the riffles throughout the study reach Snails another voracious grazer of algae also were relatively abundant at the Goods Bridge and Knights Bridge sites Additionally large numbers of the large caddisfly larvae *Dicosmoecus* were observed throughout most of the lower river in a range of depths and habitats The large densities of these grazers combined with the moderate level of algal biomass suggest that invertebrate grazers could have limited the accrual of algae during summer 2010 an assertion that could be evaluated with further study In northern California s Eel River high abundances of *Dicosmoecus* were detected in summers following winters that lacked bankfull flow as was the case for the Molalla River in water year 2010 The lack of disturbance might explain the high abundance of these herbivores in the Molalla River The information from this study can be used to adapt management strategies for the Molalla River and its flood plain These strategies may assist in developing and maintaining a healthy river environment that includes high quality water for aquatic life and human consumption

Adopting the Beat of Phrase: An Psychological Symphony within **Geomorphology Summary Gr1**

In a global used by displays and the ceaseless chatter of immediate transmission, the melodic splendor and mental symphony produced by the published word frequently fade in to the backdrop, eclipsed by the constant noise and distractions that permeate our lives. But, situated within the pages of **Geomorphology Summary Gr1** a stunning literary treasure full of natural thoughts, lies an immersive symphony waiting to be embraced. Constructed by a wonderful composer of language, that interesting masterpiece conducts viewers on a mental trip, well unraveling the concealed tunes and profound impact resonating within each carefully constructed phrase. Within the depths of this moving examination, we shall investigate the book is main harmonies, analyze their enthralling publishing design, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.

Geomorphology Summary Gr1 Introduction

Geomorphology Summary Gr1 Offers over 60,000 free eBooks, including many classics that are in the public domain. Open Library: Provides access to over 1 million free eBooks, including classic literature and contemporary works. Geomorphology Summary Gr1 Offers a vast collection of books, some of which are available for free as PDF downloads, particularly older books in the public domain. Geomorphology Summary Gr1 : This website hosts a vast collection of scientific articles, books, and textbooks. While it operates in a legal gray area due to copyright issues, its a popular resource for finding various publications. Internet Archive for Geomorphology Summary Gr1 : Has an extensive collection of digital content, including books, articles, videos, and more. It has a massive library of free downloadable books. Free-eBooks Geomorphology Summary Gr1 Offers a diverse range of free eBooks across various genres. Geomorphology Summary Gr1 Focuses mainly on educational books, textbooks, and business books. It offers free PDF downloads for educational purposes. Geomorphology Summary Gr1 Provides a large selection of free eBooks in different genres, which are available for download in various formats, including PDF. Finding specific Geomorphology Summary Gr1, especially related to Geomorphology Summary Gr1, might be challenging as theyre often artistic creations rather than practical blueprints. However, you can explore the following steps to search for or create your own Online Searches: Look for websites, forums, or blogs dedicated to Geomorphology Summary Gr1, Sometimes enthusiasts share their designs or concepts in PDF format. Books and Magazines Some Geomorphology Summary Gr1 books or magazines might include. Look for these in online stores or libraries. Remember that while Geomorphology Summary Gr1, sharing copyrighted material without permission is not legal. Always ensure youre either creating your own or obtaining them from legitimate sources that allow sharing and downloading. Library Check if your local library offers eBook lending services. Many libraries have digital catalogs where you can borrow Geomorphology Summary Gr1 eBooks for free, including popular titles. Online Retailers: Websites like Amazon, Google Books, or Apple Books often sell eBooks. Sometimes, authors or publishers offer promotions or free periods for certain books. Authors Website Occasionally, authors provide excerpts or short stories for free on their websites. While this might not

be the Geomorphology Summary Gr1 full book , it can give you a taste of the authors writing style.Subscription Services Platforms like Kindle Unlimited or Scribd offer subscription-based access to a wide range of Geomorphology Summary Gr1 eBooks, including some popular titles.

FAQs About Geomorphology Summary Gr1 Books

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer web-based readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience. Geomorphology Summary Gr1 is one of the best book in our library for free trial. We provide copy of Geomorphology Summary Gr1 in digital format, so the resources that you find are reliable. There are also many Ebooks of related with Geomorphology Summary Gr1. Where to download Geomorphology Summary Gr1 online for free? Are you looking for Geomorphology Summary Gr1 PDF? This is definitely going to save you time and cash in something you should think about.
