Molecular Simulation Studies on Thermophysical Properties Gabriele Raabe, 2017-02-17 This book discusses the fundamentals of molecular simulation starting with the basics of statistical mechanics and providing introductions to Monte Carlo and molecular dynamics simulation techniques It also offers an overview of force field models for molecular simulations and their parameterization with a discussion of specific aspects The book then summarizes the available know how for analyzing molecular simulation outputs to derive information on thermophysical and structural properties Both the force field modeling and the analysis of simulation outputs are illustrated by various examples Simulation studies on recently introduced HFO compounds as working fluids for different technical applications demonstrate the value of molecular simulations in providing predictions for poorly understood compounds and gaining a molecular level understanding of their properties This book will prove a valuable resource to researchers and students alike 8th International Conference on Compressors and their Systems City University London, 2013-12-19 This book contains the papers from the 2013 International Conference on Compressors and Their Systems held from 9 10 September at City University London The long running conference series is the ultimate global forum for reviewing the latest developments and novel approaches in compressor research High quality technical papers are sourced from around the globe covering technology development operation maintenance and reliability safety and environmental impact energy efficiency and carbon footprint system integration and behaviour upgrades and refurbishment design and manufacture education and professional development All the papers are previously unpublished and constitute leading edge research Presents leading edge developments in compressor technology Gives the latest prediction and modelling techniques Details the new technology and machinery **Handbook of Foaming and Blowing Agents** George Wypych, 2022-03-12 Handbook of Foaming and Blowing Agents Second Edition includes the most current information on foaming technology guiding users on the proper selection of formulation which is highly dependent on the mechanisms of action of blowing agents and foaming agents as well as dispersion and solubility The book includes properties of 23 groups of blowing agents and the typical range of technical performance for each group including general properties physical chemical properties health and safety environmental impact and applications in different products and polymers All information is illustrated by chemical reactions and diagrams Chapters in the book look at foaming mechanisms with the use of solid blowing agents which are decomposed to the gaseous products by application of heat production of gaseous products by chemical reaction and foaming by gases and evaporating liquids Introduces the fundamental mechanisms of action of blowing agents and foaming Includes best practice guidance to help engineers and technicians improve the efficiency of their existing foaming processes Enables practitioners to select blowing agents and foaming methods more effectively thus reducing the risk of poor specification Introduces useful analytical techniques for foaming Discusses the environmental impact of foaming processes **Industrial Heat Pump-Assisted Wood Drying** Vasile Minea, 2018-08-06 This book

discusses conventional as well as unconventional wood drying technologies It covers fundamental thermophysical and energetic aspects and integrates two complex thermodynamic systems conventional kilns and heat pumps aimed at improving the energy performance of dryers and the final quality of dried lumber It discusses advanced components kiln energy requirements modeling and software and emphasizes dryer heat pump optimum coupling control and energy efficiency Problems are included in most chapters as practical numerical examples for process and system components calculation and design The book presents promising advancements and R D challenges and future requirements

Heat Energy Recovery for Industrial Processes and Wastes David Borge-Diez, Enrique Rosales-Asensio, 2023-02-13 This book provides new techniques for recovering exhaust heat from gas turbines natural gas combined cycle power plants biomass boilers and waste heat recovery from compost and wastewater treatment plants The book provides modeling for the study and comparison of combined cycle power plants with a heat recovery boiler of three pressure levels with reheating inserting a technological improvement of solar hybridization and partial regeneration in the gas turbine It assesses the environmental impacts and economic sustainability associated with these improvements In addition it proposes emissions minimization with exhaust gas recirculation EGR and emissions treatment with a CO₂ capture plant CCP and combined cycle power plant Finally it provides new insights into heat recovery from compost and exhaust gases recovery from wastewater treatment plants

Climate Policy Gabriela Ionescu, 2016-06-22 This title includes a number of Open Access chapters Climate change threatens our planet's future Since it's too late to prevent climate change we must find ways to prepare for it while doing all we can to slow down the processes that are causing it The editor of this compendium an experienced and respected scientist in the field has collected

Working Fluid Selection for Organic Rankine Cycle and Other Related Cycles Attila R. Imre, 2020-06-16 The world's energy demand is still growing partly due to the rising population partly to increasing personal needs This growing demand has to be met without increasing or preferably by decreasing the environmental impact One of the ways to do so is the use of existing low temperature heat sources for producing electricity such as using power plants based on the organic Rankine cycle ORC In ORC power plants instead of the traditional steam the vapor of organic materials with low boiling points is used to turn heat to work and subsequently to electricity These units are usually less efficient than steam based plants therefore they should be optimized to be technically and economically feasible The selection of working fluid for a given heat source is crucial a particular working fluid might be suitable to harvest energy from a 90 °C geothermal well but would show disappointing performance for well with a 80 °C head temperature The ORC working fluid for a given heat source is usually selected from a handful of existing fluids by trial and error methods in this collection we demonstrate a more systematic method based on physical and chemical criteria
